Lenze

Global Drive

Lenze | An introduction

Whatever drive system you have in mind, we can make it a reality.

Our "one-stop shop" enables us to offer you a complete range of reliable, high-performance electronic and mechanical drive products. Our product range includes frequency inverters, power converters, servo-controllers, variable speed drives and speed-transforming gears, motors as well as brakes and clutches. This makes Lenze the ideal supplier for your applications – not only for individual components, but also for complete drive systems, from project planning to setup and commissioning.

In addition, our global service and distribution network provides local customer service as well as fast and comprehensive after sales service. Our quality assurance system for development, production, sales and service is certified to DIN ISO 9001 : 2000. Our environmental management system is also certified to DIN ISO 14001. Our customers measure the quality of our products. It is our responsibility to meet their requirements. Our company policy, which places the customer at the centre of our focus, means that quality is always our top priority.

Why not find out for yourself?

Partnership | Created as a system

Maximum power combined with high drive performance in a single universally applicable system: the **8200 vector frequency inverter range.** The modular product range can provide a solution which, as well as meeting the requirements of your individual drive tasks, is also cost-effective.

Global Drive

Lenze

We can provide a complete and universally applicable system able to meet all your operational, diagnostics and communication needs in a user-friendly way. Developed specifically for use in day-to-day operations, the 8200 vector device range is part of our field-proven system comprising expert advice, training, support service and much more - features that really pay off.

We want to be sure that you receive the correct products in good time. In order to help us to do this, please make sure you provide the following information:

• Your address and ordering data

• Our order numbers/designations for each catalog product

• Your delivery data, i.e. delivery date and delivery address

How to order

You will find the order numbers/designations you require in this section (Quick selection guide) or on the relevant page in the product description.

• Make a photocopy of the fax order form which you will find on the last page of this catalog.

• Enter the order numbers/designations in the appropriate columns.

• Enter your customer details.

• Send the fax order form to your Lenze sales office.

You don't know where your Lenze sales office is?
No problem!
You will find all the information you need on the Internet at www.Lenze.com.
We would be delighted to assist you.

Lenze

This catalog introduces you to Lenze's extensive 8200 vector range of frequency inverters. In addition to the base controllers, a wide variety of application-specific accessories are available to meet the individual requirements of your drive system. Lenze can also provide components for automating your system, such as the Drive PLC controller with expansion options, programmable displays for process visualisation and much more – true system-based solutions. To help you to select the right components for your drive system, we have put together a basic configuration comprising an inverter and a terminal module, which you will find in the **quick selection guide on the following pages.**

This inverter configuration can be used to solve most common applications. If you require a different configuration, simply find the product you require in the relevant section and enter its designation in the fax order form.

The general table of contents will help you to find specific items.

Have fun making your selections!

The next section, "8200 vector – A model system" contains information about the essential features of and comprehensive functions offered by the 8200 vector.

**Lenze**

8200 vector – Created as a system

The concept of the 8200 vector frequency inverter is based on a modular system of complementary components. Combined with a Lenze geared motor or a Lenze three-phase AC motor, it can be used to implement electronic variable speed drives for a multiplicity of applications.

Compact
Side-by-side mounting saves space in the control cabinet. Integrated filters (optional) simplify installation.

Flexible
The modular structure enables the inverters to be optimised for your application. This results in cost-effective but high-performance drive solutions. Whether as a "stand-alone" inverter with set value selection via potentiometer or a networked inverter with speed feedback in master/slave mode – the inverter functions can be adapted to suit every application.
Versatile
The range is completed by special assembly techniques such as push-through technology to reduce the heat generated in the control cabinet or "cold plate" technology, which enables a customer-specific heatsink to be used.

Uncomplicated
This range of inverters is characterised by its ease of control and operation combined with an extensive range of functions. A transparent menu structure and assisted commissioning using the Global Drive Control easy (GDC easy) parameterisation software enable the inverter to be parameterised and diagnosed quickly and easily. (Download via Internet)

Transparent
The keypad XT is used to display the operating parameters. 8 keys and a text display provide quick and easy access to the inverter parameters via the transparent menu structure. The keypad XT is also used for the purposes of status display and error diagnostics. In addition, its built-in memory can be used to transfer settings to other inverters.

User-friendly
The transparent and user-friendly drive documentation can provide answers to your questions quickly. We even have DOCcert (TÜV) certification to prove this.

Operational reliability
Configurable slip compensation can be employed to compensate load-dependent fluctuations in speed without having to apply complex speed feedback. The maximum current limiting function ensures stable operation at every operating point for both static and dynamic loads. A PTC resistor can be connected for motor protection.

Global application
The broad input voltage range of up to 500 V (+10%) means that your machine's installation location is all but irrelevant – wherever it may be in the world. As you would expect, the 8200 vector is certified to international standards.

Drive characteristics
- Power range 0.25 kW…7.5 kW 230 V/240 V (+10%)
  0.55 kW...90 kW 400 V/500 V (+10%)
- Overload capacity 180% of rated torque for 60 seconds, from 15 kW 210% of rated torque for 3s
- V/f linear, V/f quadratic, vector control, sensorless torque control modes
- Chopper frequency 1, 2, 4, 8, 16 kHz
- Output frequency up to 650 Hz

Input and output terminals
- Up to 2 analog inputs, bipolar as an option
  (0-10 V, -10 V...+10 V, 0-20 mA, 4-20 mA;
  10-bit resolution)
- Up to 2 analog outputs (0-10 V, 0-20 mA, 4-20 mA;
  10-bit resolution)
- Up to 6 potential-free digital inputs with switchable logic
- Up to 2 digital outputs and one frequency output
- Up to 2 relay outputs (also for direct mains connection 240 V AC)
- Selection option for incremental encoder

Fieldbus communication
- RS232/485 serial interface;
  optical fibre as an option
- Bus interface to most common fieldbus systems
  (CAN, PROFIBUS-DP, INTERBUS, INTERBUS LOOP,
  LON, DeviceNet, CANopen, AS-Interface)

Protection functions
- Short-circuit-resistant, protected against earth faults during operation
- Configurable current limiting, warnings and error messages in the event of overcurrents
- Protected against overvoltages and undervoltages
- Warnings and error messages in the event of overtemperatures on the frequency inverter
- Input for PTC or thermal contact and I^2t monitoring for motor protection
- Motor phase failure detection
- Integrated brake transistor (up to 11 kW)
- Integrated RFI filters to EN55011 class A or B (device-dependent)

Standard functions
- PID controller
- Flying restart with coasting motor
- Slip and mains voltage compensation
- Load loss/belt monitoring
- Smooth start/stop along S ramps
- DC braking
- Motor potentiometer
- 4 freely parameterisable parameter sets which can be switched online

Control and operation
- Keypad XT with display in plain text and menu structure
- Copy function with keypad for transferring inverter settings
- Password protection
- Global Drive Control easy control and parameterisation software (can be downloaded from the Internet)
- Spring-clamp terminals for cable cross-sections up to 1.5 mm^2 on all function modules with plug-in terminals
- Shield sheets for motor cable and control cables supplied with the frequency inverter

Certifications/Approvals
- UL, cUL, CE

Keypad XT

User-friendly menu structure and plain text display

Plug-in spring-clamp terminal strip

Shield sheet for control cables

Shield sheet for motor cables

Quick selection guide
Operation at rated power (normal operation)

In normal operation, the inverter is set for the rated power of the motor.
Note: During operation at increased rated power, a larger motor may be used under certain circumstances at the same inverter power as in normal operation, e.g. in pump and fan applications. Please use the quick selection guide on page 1-9 to make your selections for "Operation at increased rated power".

Supply voltage?		
230 V AC	400 V AC	500 V AC

Max. 20 m motor cable, radio interference level "A"?					
Yes	No	Yes	No	Yes	No

Base controllers without integrated EMC filters

3~ 500 V — 400 V/500 V, 3-phase, without integrated EMC filters (see page **1-12**)

3~ 400 V — 400 V/500 V, 3-phase, without integrated EMC filters (see page **1-12**)

3~ 230 V — 230 V, 3-phase, without integrated EMC filters (see page **1-11**)

1~ 230 V — 230 V, single-phase, without integrated EMC filters (see page **1-10**)

Base controllers with integrated EMC filters

3~ 500 V — 500 V, 3-phase, with integrated EMC filters (see page **1-18**)

3~ 400 V — 400 V, 3-phase, with integrated EMC filters (see page **1-16**)

3~ 230 V — 230 V, 3-phase, with integrated EMC filters (see page **1-15**)

1~ 230 V — 230 V, 1-phase, with integrated EMC filters (see page **1-14**)

Quick selection guide
Operation at increased rated power

During operation at increased rated power, a larger motor may be used under certain circumstances at the same inverter power as in normal operation. The inverter may be operated at increased rated power under the following conditions:

– In the mains voltage ranges specified
– Only 2 kHz or 4 kHz operating frequency
– Only with approved mains chokes, fuses and cable cross-sections
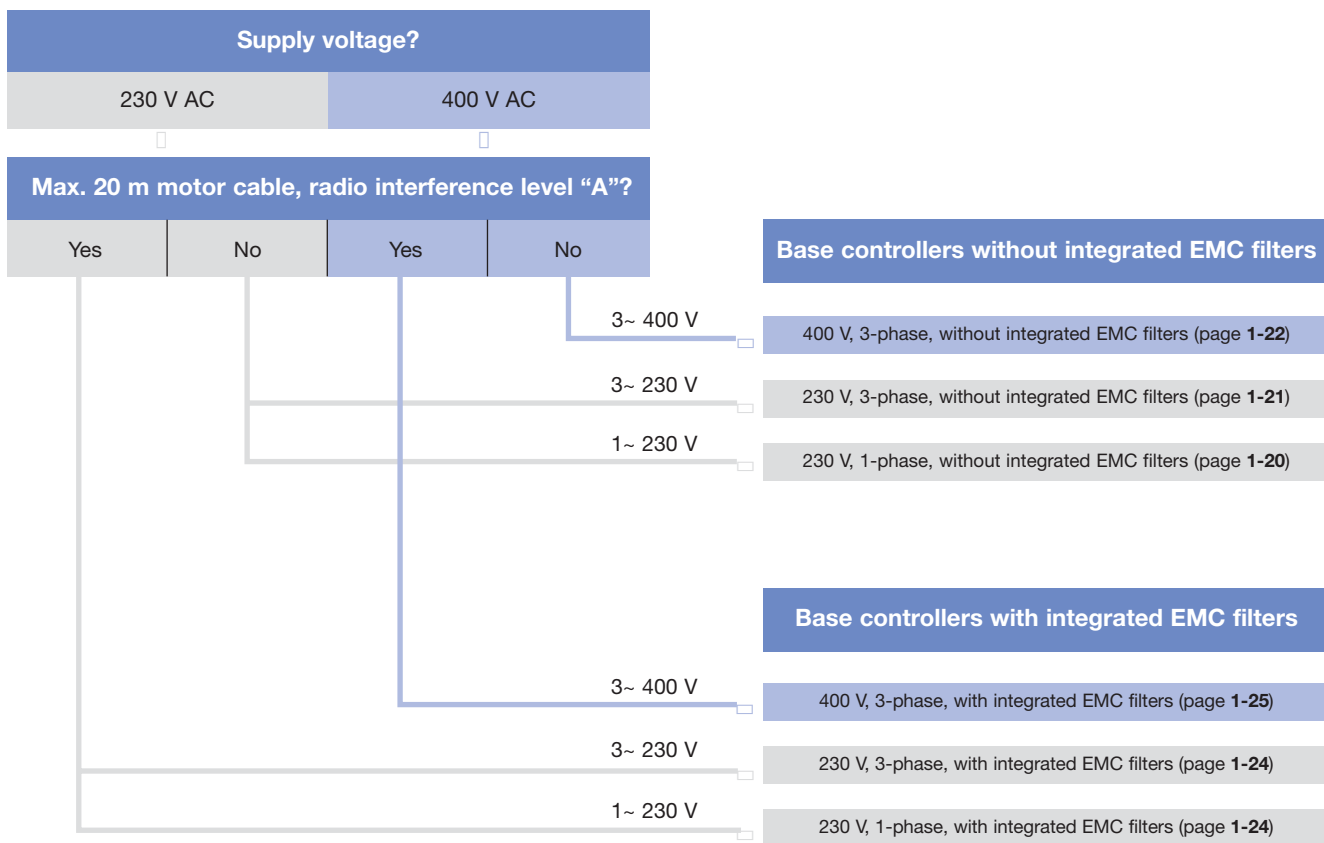

During operation at rated power (normal operation), the inverter is set for the rated power of the motor. Please use the quick selection guide on page 1-8 to make your selections for "Normal operation".

Base controllers | 8200 vector

2

2

Select the base controllers for your application on the following pages. The base controller is only supplied with one blanking plate. Two interfaces (three drives > 15 kW) enable the inverter to be fitted with control terminal modules or various bus modules as required.

Information about the modules (function and communication modules) can be found in the Automation chapter, page 3-1.

Operation at rated power (normal operation)

Operation at increased rated power

Base controllers

Standard mounting in the control cabinet

Mounting on a customer-specific heatsink ("cold plate")

Discharge of waste heat by means of push-through technology mounting
In normal operation, the inverter is set for the rated power of the motor. In this mode, the 8200 vector is suitable for a multiplicity of applications.

Under certain conditions, the 8200 vector can be operated at increased power, i.e. the inverter runs with a higher power motor. Typical applications include those involving pumps and fans with quadratic V/f characteristic.

Special designs enable the heat generated in the control cabinet to be reduced. In the "cold plate" special design (not available for all frame sizes), the base controller is supplied without a heatsink and can be mounted on a customer-specific heatsink (e.g. an oil or water cooler). In the "push-through technology" special design, the base controller is mounted in the control cabinet in such a way that the heatsink is located on the exterior of the cabinet.

The "IT system" special version permits installation in three-phase isolated supply systems. The electric strength of the base controllers is ensured even in the event of a single-phase short circuit on the supply system. In the "safe stop" special version, the base controller can be integrated into a safety system where it can replace additional safety components.

More detailed information can be found in the relevant sections.

Information about mains chokes, brake resistors and much more can be found in the "Accessories" chapter.

Standards and application conditions

Conformity	CE	Low voltage directive (73/23/EEC)
Approvals	UL 508C	Underwriter Laboratories (File No. E132659) Power conversion equipment
Max. permissible motor cable length	At rated mains voltage and operating frequency of 8 kHz without additional output filters	
Shielded	50 m	The permissible cable lengths may be affected
Unshielded	100 m	by other EMC conditions that have to be met.
Vibration resistance	Accelerational stability up to 0.7g (Germanischer Lloyd, general conditions)	
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)	
Pollution degree	VDE 0110 Part 2 pollution degree 2	
Packaging (DIN 4180)	Dust packaging	
Permissible temperature ranges		
Transport	-25°C…+70°C	
Storage	-25°C…+60°C	
Operation	-10°C…+55°C	At temperatures of +40°C, the rated output current should
	-10°C…+50°C (8200 vector 15...90 kW only)	be derated by 2.5%/°C.
Permissible installation height	0...4000 m above sea level	The rated output current should be derated by 5%/1000 m above 1000 m above sea level.
Mounting position	Vertical	
Mounting clearances		
Above/below	≥100 mm	
To the side	Mounted at intervals of 3 mm	
DC bus operation	Possible, except E82EV251K2C and E82EV371K2C	

Lenze

General electrical data

EMC	Compliance with requirements to EN 61800-3/A11		
Noise emissions	Compliance with threshold classes A and B to EN 55011		
0.25...11 kW	E82xVxxxKxC0xx without additional filters		
	E82xVxxxKxC2xx with external filters		
15...90 kW	E82EVxxxK4B3xx without additional filters		
	E82xVxxxK4B2xx with external filters		
Noise immunity	Requirements to EN 61800-3 incl. A11 noise immunity		
	Requirements	**Standard**	**Intensity of tests**
	ESD	EN 61000-4-2	3, i.e. 8 kV with air discharge, 6 kV with contact discharge
	Conducted high frequency	EN 61000-4-6	150 kHz ...80 MHz, 10 V/m 80% AM (1kHz)
	HF field (housing)	EN 61000-4-3	80 MHz ...1000 MHz, 10 V/m 80% AM (1kHz)
	Burst	EN 61000-4-4	3/4, i.e. 2 kV/5 kHz
	Surge (voltage surge on power cable)	EN 61000-4-5	3, i.e. 1.2/50 µs, 1 kV phase-phase, mains cable) 2 kV phase-PE
Insulation strength	Overvoltage category III to VDE 0110		
Leakage current to PE (to EN 50178)	> 3.5 mA, i.e. fixed installation required, PE must be reinforced		
Degree of protection	IP 20		
Protective measures against	Short circuit, short to earth (protected against short to earth during operation, limited protection against short to earth on power-up), overvoltage, motor instability, motor stalling, motor overtemperature (input for PTC or thermal contact, $I^2 t$ monitoring)		
Total insulation of control circuits	Mains isolation: Double/reinforced insulation to EN 50178		
Permissible mains systems	Operation on TT systems, TN systems or systems with earthed neutral without additional measures		
	Operation on IT systems only possible with a variant		
Operation on public mains supplies	Limits for harmonic currents to EN 61000-3-2		
	Total power on mains	Adherence to requirements [1]	
	<0.5 kW	With mains choke	
	0.5 kW...1 kW	With active filter (currently in development)	
	>1 kW	Without additional measures	

[1] The additional measures listed enable the drive controller alone to meet the requirements of EN 61000-3-2. Responsibility for adherence to requirements on the part of the machine/system lies with the machine/system manufacturer.

Inputs and outputs

Analog inputs **Analog outputs**	With standard I/O	1 input, bipolar as an option 1 output
	With application I/O	2 inputs, bipolar as an option 2 outputs
Digital inputs **Digital outputs**	With standard I/O	4 inputs, 1 optional single-track frequency input 0...10 kHz; two-track 0...1 kHz 1 input for controller inhibit, 1 output
	With application I/O	6 inputs, 1 optional single/double-track frequency input 0...100 kHz; 1 input for controller inhibit, 2 outputs, 1 frequency output 50 Hz....10 kHz
Scan times	Digital inputs	1 ms
	Digital outputs	4 ms
	Analog inputs	2 ms
	Analog outputs	4 ms (filter time: τ = 10 ms)
Relay output	0.25...11 kW	1 relay output 250 V AC/3 A, 24 V DC/2 A ...240 V/0.16 A (changeover contact)
	15...90 kW	2 relay outputs 250 V AC/3 A, 24 V DC/2 A ...240 V/0.22 A (changeover contact)
Generator mode	0.25...11 kW	Integrated brake transistor
	15...90 kW	With brake chopper 8253 or 9352

Open and closed-loop control

Open-loop and closed-loop control methods		V/f characteristic control (linear/quadratic), vector control torque provision	
Chopper frequency	0.25 …11 kW	2 kHz,4 kHz,8 kHz,16 kHz	
	15...90 kW	1 kHz, 2 kHz, 4 kHz, 8 kHz, 16 kHz, either optimised for noise or power loss	
Torque characteristics	Maximum torque 0.25 ...11 kW	$1.8 \times M_r$ for 60 s	If motor rated power = drive controller Rated power
	Maximum torque 15 ...90 kW	$1.8 \times M_r$ for 60 s $2.1 \times M_r$ for 3 s after controller enable	
	Setting range	1 :10	in speed range 3... 50 Hz, accuracy < 8%
	Torque/ speed characteristic		
Sensorless speed control	Minimum Output frequency	1.0 Hz (0 ...M_r)	
	Setting range	1 :50	Related to 50 Hz and M_r
	Accuracy	±0.5%	
	Cyclic running	± 0.1 Hz	in speed range 3... 50 Hz
Output frequency	Range	- 650 Hz... + 650 Hz	
	absolute resolution	0.02 Hz	
	normalised resolution	Parameter data: 0.01%, process data: 0.006% (= 2^{14})	
Digital setpoint preselection	Accuracy	± 0.005 Hz (= ± 100 ppm)	
Analog setpoint preselection	Linearity	±0.5%	related to momentary value
	Temp. sensitivity	+0.3% (0...+60°C)	related to momentary value
	Offset	±0%	
	A/D converter	10-bit resolution A/D converter	
		Error 1 digit	≡ 0.1% related to upper range value

General information

– 8200 vector frequency inverters must only be used as built-in units
– If the exhaust air contains pollutants (dust, lint, grease, aggressive gases) then appropriate counter-measures must be in place (e.g. installation of filters, regular cleaning etc.).
– Ensure there is enough mounting space. (see page 2-4 bzw. 2-31)
  Several devices can be mounted side by side. Ensure unhindered inlet of cooling air and discharge of exhaust air. Observe mounting clearances of 100 mm above and below.
– In the event of continuous oscillations or vibrations, check the use of vibration dampers.
– Information about installation according to EMC can be found in the 8200 vector System Manual (see page 6-3).

The frequency inverters can be fitted as follows into a control cabinet:

• With the **standard fixtures** included in the scope of (included in the scope of supply)
• With special **fixtures** (power-dependent accessories)

8200 vector in "cold plate" technology

8200 vector frequency inverters in "cold plate" technology (types E82CVxxxKxx) dissipate their waste heat (heat loss) via a cooler appropriate for the application (e.g. cumulative cooler). For this purpose the frequency inverters are equipped with a bare metal cooling plate in place of a heatsink. This is connected to a separate heatsink via a thermal link.

The use of "cold plate" technology is recommended if
- There are a lot of pollutants in the surrounding air preventing the use of external fans for cooling (e.g. control cabinet fans)
- The control cabinet selected must have a high IP degree of protection (e.g. IP 65)
- The waste heat is to be dissipated via a medium (e.g. water, oil)
- A cumulative cooler is to be incorporated for all of the frequency inverters
- Installation space is limited

Notes:
- The features, technical data and rating data shown on pages 2-4 apply; see mounting and dimensions on the following pages.
- The 8200 vector frequency inverter in "cold plate" technology is a special design. It is available on request.
- The 8200 vector frequency inverter in "cold plate" technology is supplied with integrated RFI filters up to 11 kW.
- All 8200 vector frequency inverters are approved in accordance with UL508C. However, devices in "cold plate" technology must be mounted by the user to ensure that the approved features are provided. Therefore these frequency inverters bear the UR mark (instead of the UL mark).

2

Cooler requirements

The power losses of the frequency inverters can be dissipated via coolers operating with various cooling media (air, water, oil etc.).

The following points are important to ensure safe and reliable operation of the frequency inverters:
- Good thermal connection to the cooler
  – The contact area between the cooler and the frequency inverter must be at least as large as the cooling plate of the frequency inverter.

  – Level contact surface, deviations up to a maximum of 0.05 mm
  – Connect the cooler and the cooling plate using all the screw connections prescribed.
- Do not exceed the maximum temperature of the frequency inverter cooling plate (75°C) .
- Adhere to the thermal resistance R_{th} (transition between cooler and cooling medium) specified in the table. The values apply to the operation of the frequency inverters under the rated conditions.

Push-through technology

The "push-through technology" special design of the 8200 vector frequency inverter enables the waste heat in the control cabinet to be reduced. The frequency inverter is mounted in the control cabinet in such a way that the inverter heatsink is located outside the cabinet. This means that almost all the waste heat from the inverter can be dissipated outside the control cabinet by means of convection or forced cooling.

The "push-through technology" special design is particularly suitable for applications in which self-ventilation via the control cabinet surface is insufficient. The "push-through technology" special design enables air conditioners or fans with lower ratings to be used or, in some cases, to be left out altogether. Depending on the frequency inverter, degrees of protection up to IP65 can be achieved. This means that the inverters can be used in harsh industrial environments. The "push-through technology" special design is available in the power range from 0.25 to 90 kW. More detailed information can be found on the following pages.

Note: The 8200 vector frequency inverter in "push-through technology" is a special design. It is available on request.

Version for "safe stop" safety technology

The "safe stop" special version supports the "safe stop" safety function, providing protection against unexpected start-up in accordance with the requirements of EN 954-1 "Control Category 3" and EN 1037. The safety relay electrically isolates the voltage supply to the optocoupler for the purposes of pulse transmission to the IGBT. It must be activated externally with +24 V DC.
In comparison to the solution using a motor contactor, this variant offers the following advantages:
– An external motor contactor is not required
– Reduces wiring
– Space saving
– Improved EMC: The motor cable shield must not be interrupted

With the "safe stop" function, an "emergency stop" is not possible without additional measures:
– There is no electrical isolation between the motor and the drive controller and no "service switch" or "repair switch"
– Electrical isolation is required for an "emergency stop" e.g. by means of a central mains contactor
Note: The "safe standstill" 8200 vector frequency inverter is a special version. It is available on request.
Terminal assignment		Data		
33	Reference potential for the input Emergency stop	Safety relay	Coil voltage at +40°C	+24 V DC (+19.5...36 V)
			Current at 24 V DC	30 mA
			Test voltage contact t coil	1500 V AC $_{rms}$ for 1 min
34	Emergency stop input		Test voltage contact t contact	1500 V AC $_{rms}$ for 1 min
			Electr. service life at rated load	~10^7 operating cycles
			Mechanical service life	~10^7 operating cycles
K31	Feedback contact	Feedback contact	Switching voltage	24 V DC
K32			Continuous current	5...700 mA

[1] The technical data corresponds to that for E82EVxxx inverters (see page 2-8).

Lenze

Version for isolated supply systems (IT systems)

The "IT system" special version enables the 8200 vector frequency inverter to be connected to isolated supply systems. The frequency inverters are designed with electrical isolation. This prevents the activation of isolation monitoring, even if more than one frequency inverter has been installed.

The electric strength of the frequency inverters is thus increased, so that even in the event of an isolation fault or earth fault in the supply system, they will not be damaged. The operational safety of the system is not affected.
Note: The IT system version of the 8200 vector is a special version. It is available on request.

Function and communication modules

Lenze can provide a wide range of components for integration into the automation of the machine or system. The function modules and communication modules enable the inverter to be adapted according to the specific requirements of the application in terms of the number of digital and analog inputs and outputs and in terms of interfacing with the fieldbus. The inverter has two interfaces, one of which can be fitted with a communication module and the other with a function module. The possible combinations of function and communication modules are listed in the table below. An additional interface for another function module is available in the power range from 15.0…90 kW. In this way, for example, the frequency inverter can be operated in parallel during simultaneous bus and I/O operation. This makes start-up and diagnostics easier, particularly in complex applications (fieldbus operation and I/O mixed operation).

✓ Combination possible
○ Combination possible; AIF module must have an external supply
⊠ Combination not possible

All communication modules can be combined with the 9300 vector range of drives and with the DrivePLC. Function modules (with screw terminal) can be used in conjunction with the 8200 motec and starttec.

The keypad XT and Global Drive Control easy (GDC easy) PC software, which simplify and speed up the operation of the inverter by means of a simple menu structure and assisted dialogue boxes, are available for parameterisation and diagnostics.

Automation components

Bus-compatible displays (HMI) which can be integrated into the control cabinet are available in various sizes for the visualisation of inverter parameters and process data. The Drive PLC is a freely programmable PLC (EN 61131-3) which can be used in conjunction with the frequency inverter to implement distributed control tasks. Extension boards can be used to expand the Drive PLC

input and output terminals. The range is completed by bus-compatible, freely programmable I/O terminals, which are used for interfacing sensors and actuators with the bus.

Keypad XT – Operating module

Keypad XT	Order ref.	EMZ9371BC
Keypad	Order ref.	E82ZBC

The keypad XT is available for visualising operating parameters and parameter settings for the inverter. 8 keys and a text display provide quick and easy access to the inverter parameters via the transparent menu structure. The keypad XT is also use for the purposes of status display and error diagnostics. In addition, its built-in memory can be used to transfer parameters to other inverters. The keypad XT can also be used on devices

from the 9300 vector, 9300 servo and Drive PLC ranges, as well as on 8200 motec motor inverters (via hand terminals). The keypad is suitable for installation in the control cabinet. The differences between the keypad XT and keypad are listed in the "Features" overview.

Global Drive Control – GDC easy parameterisation software

GDC easy	Order ref.	ESP-GDC2-E
GDC	Order ref.	ESP-GDC2

The Global Drive Control easy software tool is an easy to understand and convenient tool for the operation, parameter setting and diagnostics of 8200/8200 vector range frequency inverters.

Essential features include:
• Dialogue-assisted operation
• Monitor window for displaying operating parameters and diagnostics
• Extensive help functions
• Loading and saving parameter files from and to the inverter
• Saving and printing out parameter settings as code lists

Global Drive Control can for example be downloaded from the Internet at www.Lenze.com.

It offers the following advantages:
• Easy as possible, intuitive operation
• Even suitable for beginners
  (no program knowledge required)

Lenze

Global Drive Control – GDC easy parameterisation software

Tip:
Lenze three-phase AC motors and Lenze geared motors can be supplied with the Lenze pulse encoder ITD21 (512/2048 increments, HTL output signals). This enables two-track rotational speed feedback (tracks A and B) to be set up for the application I/O function module.

Lenze

CAN PT (system bus)

CAN PT (system bus)	Order ref.	E82ZAFCC010
CAN (system bus)	Order ref.	E82ZAFCC

The CAN (system bus) function module can be used to interface the 8200 vector with the CAN (Controller Area Network) serial communication system. Plug-in spring-clamp terminals enable cable cross-sections of up to 1.5 mm^2 to be connected quickly and easily without the need for ferrules. Due to the plugged-on spring-clamp terminal strip, the function module juts out approx. 15 mm of the front panel of the frequency inverter. For the purposes of simple diagnostics, dual screw terminals can be used to interrupt communication with the frequency inverter without affecting the bus operation of other devices. The module is also available in a basic version without plug-in terminal.

The function module enables the 8200 vector to perform additional functions, including:
• Parameter preselection/remote parameter setting
• Data transfer between inverters
• Connection to external control systems (e.g. drive PLC) and host systems
• Optional connection to
 – distributed terminal extensions (see also page 3-42)
 – keypads

	Flexible: 1.5 mm² (AWG 16) without ferrules 1.5 mm² (AWG 16) with ferrules without plastic sleeve 0.5 mm² (AWG 20) with ferrules with plastic sleeve [1] 1.5 mm² (AWG 16) with ferrules with plastic sleeve [2]				
DC supply to the function module	Internal				
Insulation voltage to reference earth/PE	50 V AC				
Ambient temperature	Operation: −20 ... +60°C Transport: −25 ... +70°C Storage: −25 ... +60°C				
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)				

[1] Spring-clamp connection
[2] Dual screw connection
[3] You should be aware of the additional effect of the number of devices
and the cable cross-section used on the maximum bus cable lengths.

Note:
Two bus terminating resistors (120 Ω) are included in the scope of supply.

Wiring notes
We recommend the following signal cable:

| System bus cable specification	Total length up to 300 m	Total length up to 1000 m
Cable type	LIYCY 2 x 2 x 0.5 mm² (shielded twisted pairs)	CYPIMF 2 x 2 x 0.5 mm² (shielded twisted pairs)
Cable resistance	≤ 40 Ω/km	≤ 40 Ω/km
Capacitance per unit length	≤ 130 nF/km	≤ 60 nF/km
Connection	Pair 1 (white/brown): CAN-LOW and CAN-HIGH Pair 2 (green/yellow): CAN-GND	

3

CAN I/O PT (system bus)

CAN I/O PT (system bus)	Order ref.	E82ZAFCC210
CAN I/O	Order ref.	E82ZAFCC200

The CAN (system bus) function module can be used to interface the 8200 vector with the CAN (Controller Area Network) serial communication system. Plug-in spring-clamp terminals enable cable cross-sections of up to 1.5 mm^2 to be connected quickly and easily without the need for ferrules. Due to the plugged-on spring-clamp terminal strip, the function module juts out approx. 15 mm of the front panel of the frequency inverter. The module has two freely programmable digital inputs. They can be used to activate the controller inhibit and two additional freely selectable signals via a digital signal. The node address and the baud rate can also be preselected easily using DIP switches. For the purposes of simple diagnostics, dual screw terminals can be used to interrupt communication

with the frequency inverter without affecting the bus operation of other devices. The module is also available in a basic version without plug-in terminal.
The function module enables the 8200 vector to perform additional functions, including:
• Parameter preselection/remote parameter setting
• Data transfer between inverters
• Connection to external control systems (e.g. drive PLC) and host systems
• Optional connection to – distributed terminal extensions (see also page 3-42) – keypads

X3.1/	Name	Function	Level
7	GND1	Reference potential 1	
LO	CAN-LOW	System bus LOW (data cable)	
HI	CAN-HIGH	System bus HIGH (data cable)	
X3.2/			
E1	Digital inputs	User-defined	0= LOW (0 … +3 V)
E2			1= HIGH (+12 … +30 V) (reference: GND1)
X3.3/			
7	GND1	Reference potential 1	
39	GND2	Reference potential 2 for controller inhibit (CINH) at X3.3/28	
28	CINH	Controller inhibit	• Start = HIGH (+12 V...+30 V) • Stop = LOW (0 V ... +3 V)
20		DC voltage source for internal supply for controller inhibit (CINH)	+20 V (reference: GND1)

Supply via internal voltage source (X3.3/20):
• X3.3/28, controller inhibit (CINH)
• X3.2/E1 and X3.2/E2, digital inputs
Supply via external voltage supply
• X3.3/28, controller inhibit (CINH)
• X3.2/E1 and X3.2/E2, digital inputs

PROFIBUS-DP PT

General data and application conditions

Communication medium	RS485
Communication profile	PROFIBUS-DP (DIN 19245 Part 1 and Part 3)
Drive profile	DRIVECOM profile "Drive Technology 20" or Lenze device control
Baud rate [kBit/s]	9.6... 12000 (automatic detection)
PROFIBUS-DP device	Slave
Network topology	Without repeater: line With repeaters: line or tree
Process data words (PCD) (16 bits)	1 word ... 10 words
DP user data length	Parameter channel (4 words) + process data words
Number of devices	Standard: 32 (= 1 bus segment) including host system With repeaters: 128 including host system and repeaters
Max. cable length per bus segment	1000 m (depending on baud rate and cable type used)

Communication time	• Sum of scan time and processing time in the
	  fieldbus devices. The times are independent of one another.
	• Processing time in the controller:
	  – Parameter data and process data are independent of each other
	  - Parameter data: approx. 30 ms +20 ms tolerance
	  – Process data: approx. 3 ms +2 ms tolerance

Electrical connection	Push-on terminal strips with spring-clamp connection and dual screw connection
Connection options	Rigid: 1.5 mm² (AWG 16)
	Flexible: 1.5 mm² (AWG 16) without ferrules 1.5 mm² (AWG 16) with ferrules without plastic sleeve 0.5 mm² (AWG 20) with ferrules with plastic sleeve [1] 1.5 mm² (AWG 16) with ferrules with plastic sleeve [2]

DC supply for function module	• Internal
	• External, only required for
	  – bus devices which are to be disconnected from the mains, but com-
	    munication with the master is to be maintained
	  – bus devices with activated bus terminating resistor, which are to be
	    disconnected from the mains, but the bus system is to remain active
	  – supply via separate mains supply
	  – +24 V DC ± 10%, max. 80 mA per function module

Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: –20 ... +60°C Transport: –25 ... +70°C Storage: –25 ... +60°C
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

[1] Spring-clamp connection
[2] Dual screw connection

Note:
• Two LEDs are located on the function module to indicate the communication status.
• A configuration diskette for PROFIBUS-DP containing the description files for the devices (EDS files) is included in the scope of supply.

Important:
The internal or external DC supply to the controller inhibit terminal (X3/28) is provided
independently of the internal or external DC supply to the function module.

Tip:
The external DC supply to the function module is provided via terminals X3/59 and X3/7. The connection diagrams above indicate the internal DC supply to the function module as an alternative option.

INTERBUS PT

INTERBUS PT	Order ref.	E82ZAFIC010
INTERBUS	Order ref.	E82ZAFIC

The INTERBUS function module is used to interface the frequency inverter directly with the remote bus. The DRIVE-COM profile 20 is supported for this connection. DIP switches are used to set the process data volume, PCP communication and the last physical bus device. Plug-in spring-clamp terminals enable cable cross-sections of up to 1.5 mm^2 to be connected quickly and easily without the need for ferrules.
Due to the plugged-on spring-clamp terminal strip, the function module juts approx. 15 mm of the front panel of the frequency inverter. The module is also available in a basic version without plug-in terminal.

Terminal assignment

X3.1/	Name	Function
59		External DC supply for function module (+ 24 V DC ± 10%, looping through of external supply for function module possible)
7	GND1	Reference potential for X3.3/20
X3.2/		
7	GND1	Reference potential for X3.3/20
39	GND2	Reference potential for controller inhibit (CINH) at X3.3/28
X3.3/

J	DI2	
K	GND1	Reference potential for outgoing data cable
y	PES	Additional HF shield termination
28	CINH	Controller inhibit • Start = HIGH (+12 V … +30 V) • Stop = LOW (0 … +3 V)
20		DC voltage source for internal +20 V (reference: GND1)

Supply: Controller inhibit terminal (X3/28) via internal voltage supply X3/20
Supply: Function module and terminal "controller inhibit" (X3/28) via external voltage
Supply for terminal controller inhibit (CINH) via external voltage source

—— Minimum wiring required for operation

Lenze

INTERBUS PT

General data and application conditions

Communication medium	RS485
Drive profile	DRIVECOM profile "Drive Technology 20" or Lenze device control
Baud rate [kBit/s]	500
INTERBUS device	Slave
Network topology	Ring (go and return lines in the same bus cable)
Process data words (PCD) (16 bits)	1 Word ... 6 words
Parameter data words (PCP) (16 bits)	0/1 word
INTERBUS code (ID code)	Decimal: 227 or 3 (without PCP); hex: E3 or 3 (without PCP)
Max. PDU length	64 bytes
Supported PCP services	Initiate, Abort, Status, Identify, Get-OV-Long, Read, Write
Number of devices	Depends on the host system (I/O range), max. 63
Max. distance between 2 devices	400 m
Communication time	• Sum of scan time and processing time in the fieldbus devices. The times are independent of one another. • Processing time in the controller: – Parameter data and process data are independent of each other – Parameter data (PCP): approx. 30 ms +20 ms tolerance – Process data: approx. 3 ms +2 ms tolerance
Electrical connection	Push-on terminal strip with spring-clamp connection
Connection options	Rigid: 1.5 mm² (AWG 16)
	Flexible: 1.5 mm² (AWG 16) without ferrules 1.5 mm² (AWG 16) with ferrules without plastic sleeve 0.5 mm² (AWG 20) with ferrules with plastic sleeve
DC supply for function module	• Internal • External, – only required if the communication ring must not be interrupted by a bus device being switched off or failing – supply via separate mains supply – +24 V DC ± 10%, max. 90 mA per function module – X3/59 can be loaded with a maximum of 3A when the supply voltage is looped through to other bus devices
Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: –20 ... +60°C Transport: –25 ... +70°C Storage: –25 ... +60°C
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

Note:
Two LEDs are located on the function module to indicate the communication status.

Important:
The internal or external DC supply to the controller inhibit terminal (X3/28) is provided **independently** of the internal or external DC supply to the function module.

Tip:
The external DC supply to the function module is provided via terminals X3/59 and X3/7
(see connection diagrams above).

LECOM-B PT (RS485)

| LECOM-B PT (RS485)	Order ref.	E82ZAFLC010
LECOM-B (RS485)	Order ref.	E82ZAFLC

Communication via the function module LECOM-B (RS485) uses the Lenze protocol LECOM. This protocol is open to the user. Components which support this protocol area available for various systems (e.g. Simatic S5). Plug-in spring-clamp terminals enable cable cross-sections of up to 1.5 mm² to be connected quickly and easily without the need for ferrules. Due to the plugged-on spring-clamp terminal strip, the function module juts out approx. 15 mm

of the front panel of the frequency inverter. For the purposes of simple diagnostics, dual screw terminals can be used to interrupt communication with the frequency inverter without affecting the bus operation of other devices. The module is also available in a basic version without plug-in terminal.

The external DC supply to the function module is provided via terminals X3/59 and X3/7.
The connection diagrams above indicate the internal DC supply to the function module as an alternative
option.

AS-Interface PT

AS-Interface PT	Order ref.	E82ZAFFC010
AS-Interface	Order ref.	E82ZAFFC

The function module enables the 8200 vector to be controlled with digital control signals via the "AS-Interface" bus system. Plug-in spring-clamp terminals enable cable cross-sections of up to 1.5 mm^2 to be connected quickly and easily without the need for ferrules. Due to the plugged-on spring-clamp terminal strip, the function module juts out approx. 15 mm of the front panel of the frequency inverter. For the purposes of simple diagnostics, dual screw terminals can be used to interrupt communication with the frequency inverter without affecting the bus operation of other devices. The module is also available in a basic version without plug-in terminal. The "AS-Interface" (AS-i) bus system has established itself for use at the lowest field level, particularly for digital signal transfer.

It is designed for applications that do not necessarily require powerful fieldbus systems, but do nonetheless need to exploit the advantages of serial communication.

The advantages of this system are:
• Easy to use and to set up
• Less wiring required
• Easy to integrate into existing systems
• Cost reductions

Lenze

AS-Interface PT

General data and application conditions

Protocol/communication medium	AS-i
Network topology	Tree
Bus device	Slave
Max. number of nodes	31
Baud rate [kBit/s]	167
Scan time [ms]	5 ms (with 31 nodes)
Max. bus length [m]	100
Electrical connection (X3 terminal strip)	Screw terminals
Connection options (X3 terminal strip)	Rigid: 1.5 mm² (AWG 16)
	Flexible:
	1.5 mm² (AWG 16) without ferrules
	1.5 mm² (AWG 16) with ferrules without plastic sleeve
	0.5 mm² (AWG 20) with ferrules with plastic sleeve [1]
	1.5 mm² (AWG 16) with ferrules with plastic sleeve [2]
DC supply to the function module	via the bus
Isolation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: –20 ... +60°C Transport: –25 ... +70°C Storage: –25 ... +60°C
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

[1] Spring-clamp connection
[2] Dual screw connection

Note:
Two LEDs are located on the function module to indicate the communication status.

The following are available:
- 4 data bits to the 8200 vector (actuation)
  The bits can be freely assigned in the 8200 vector.
  Example:
  – Bit 1 is assigned the function "Fixed setpoint value 1"
  – Bit 2 is assigned the function "Fixed setpoint value 2"
  – Bit 3 is assigned the function "DC brake"
  – Bit 4 is assigned the function "Reversal of direction of rotation"

- 1 data bit from the 8200 vector (feedback)
  This bit can be freely assigned in the 8200 vector, e.g. with a trip error message.
- 1 AS-i monitoring bit from the AS-i module

CAN/CANopen

| CAN	Order ref.	EMF2171IB
CAN (addressing via DIP switches)	Order ref.	EMF2172IB
CANopen	Order ref.	EMF2175IB

The communication modules enable the inverter to support the CAN (2171/2172)/CANopen profile (2175). Modules 2171/2172 support parts of the CANopen communication profile and module 2175 supports the entire profile. Unlike module 2172, module 2171 has an additional DIP switch for presetting the network address and baud rate.

- The module EMF 2175IB can be switched over to DeviceNet via a DIP switch (see next page).
- Two LEDs are located on the communication modules to indicate the communication status.
- A configuration diskette for CANopen containing the description file for the devices (EDS file) is included in the scope of supply.

General data and application conditions

Communication medium	DIN ISO 11898						
Communication profile	CANopen						
DeviceNet device	Slave						
Network topology	Line (terminated at both ends with 120 Ω)						
Max. number of devices	63						
Baud rate [kBit/s]	10	20	50	125	250	500	1000
2171/2172: Max. bus length (m) [1]	–	–	1550	630	290	120	25
2175: Max. bus length (m) [1]	7450	3950	1550	630	290	120	25
Electrical connection	Screw-type terminals						
DC supply	• Internal • External – only required if a bus device is switched off or fails but communication with it is to be maintained – supply via separate mains supply – +24 V DC ± 10%, max. 100 mA per module						
Insulation voltage to reference earth/PE	50 V AC						
Ambient temperature	Operation: 0 ... +55ºC Transport: –25 ... +70ºC Storage: –25 ... +60ºC						
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)						

[1] You should be aware of the additional effect of the number of devices and the cable cross-section used on the maximum bus cable lengths.

DeviceNet

DeviceNet	Order ref.	EMF2175IB

The communication module enables the inverter to support the DeviceNet profile.

- The module can be switched over to CANopen via a DIP switch.
- The address and the baud rate can be adjusted via the DIP switch.

- Two LEDs are located on the communication module to indicate the communication status.
- A configuration diskette for DeviceNet containing description files for the devices (EDS files) is included in the scope of supply. The files can be downloaded from the Internet at www.Lenze.com.

General data and application conditions

Communication medium	DIN ISO 11898		
Communication profile	DeviceNet		
DeviceNet device	Slave		
Network topology	Line (terminated at both ends with 120 Ω)		
Max. number of devices	63		
Baud rate [kBit/s]	125	250	500
Max. bus length (thin cable) [m]	100	100	100
Max. bus length (thick cable) [m]	500	250	100
Electrical connection	Screw-type terminals		

DC supply	• Internal
	• External
	  – only required if a bus device is switched off or fails
	    but communication with it is to be maintained
	  – supply via separate mains supply
	  – +24 V DC ± 10%, max. 100 mA per module		

Insulation voltage to reference earth/PE	50 V AC		
Ambient temperature	Operation: 0 ... +55°C Transport: −25 ... +70°C Storage: −25 ... +60°C		
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)		

PROFIBUS

PROFIBUS	Order ref.	EMF2133IB

The communication module enables the inverter to support the PROFIBUS-DP profile.

- Two LEDs are located on the communication module to indicate the communication status.
- A configuration diskette for PROFIBUS-DP containing the description file for the devices (EDS file) is included in the scope of supply.

- The address can be adjusted via the DIP switch.
- Can be switched to the functionality of the 2131IB predecessor communication module via a DIP switch.

General data and application conditions

Communication medium	RS485
Communication profile	PROFIBUS-DP (DIN 19245 Part 1 and Part 3)
Selectable drive profile	• DRIVECOM profile "Drive technology 20" • PROFIDRIVE • Lenze device control
Baud rate [kBit/s]	9.6...12000 (automatic detection)
PROFIBUS-DP device	Slave
Network topology	Without repeater: line With repeaters: line or tree
Process data words (PCD) (16 bits)	1...12 words (2133IB with 8200 vector: max. 3 words; only with Servo PLC/Drive PLC: max. 12 words)
DP user data length	Parameter channel (4 words) + process data words
Max. number of devices	Standard: 32 (= 1 bus segment) including host system With repeaters: 128 including host system and repeaters
Max. cable length per bus segment	1200 m (depending on baud rate and cable type used)
Electrical connection	Screw-type terminal and SUB-D socket (9-pin)

DC supply	• Internal
	• External
	  – only required for bus devices which are to be disconnected from the mains, but communication with the master is to be maintained
	  – supply via separate mains supply
	  – +24 V DC ± 10%, max. 120 mA per module

Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: 0 ... +55°C Transport: –25 ... +70°C Storage: –25 ... +60°C
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

INTERBUS

INTERBUS	Order ref.	EMF2111IB
INTERBUS	Order ref.	EMF2113IB

The communication module enables the inverter to support the DRIVECOM drive profile "Drive technology 21" or Lenze device control (optional). INTERBUS interfacing takes place directly on the remote bus.

- Two LEDs are located on the communication module to indicate the communication status.
- EMF2113IB: The baud rate and process data words/parameter data words can be adjusted via the DIP switch.

Communication medium	RS485
Selectable drive profile	• Lenze device control • DRIVECOM profile "Drive technology 21"
Baud rate	500 kBit/s (2113IB: 500 kBit/s or 2 MBit/s)
INTERBUS device	Slave
Network topology	Ring (go and return lines in the same bus cable)
Process data words (PCD) (16 bits)	2... 3 words (2113IB with Drive PLC/Servo PLC: max. 10 words)
Parameter data words (PCP) (16 bits)	1 word (2113IB: max. 4 words)
INTERBUS code (ID code)	Decimal: 227; hex: E3
Max. PDU length	64 bytes
Supported PCP services	Initiate, Abort, Status, Identify, Get-OV-Long, Read, Write
Number of devices	Depends on the host system (I/O range), max. 63
Max. distance between 2 devices	400 m
Electrical connection	Screw-type terminal and SUB-D socket/connector (9-pin)

DC supply	• Internal
	• External
	  – required if the communication ring must not be interrupted if a bus device is switched off or fails
	  – supply via separate mains supply
	  – +24 V DC ± 10%, max. 100 mA per module

Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: 0 ... +55ºC Transport: –25 ... +70ºC Storage: –25 ... +60ºC
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

INTERBUS Loop

INTERBUS Loop	Order ref.	EMF2112IB

The communication module enables the inverter to support the DRIVECOM drive profile "Drive technology 20" or Lenze device control (optional). INTERBUS Loops can be integrated within the INTERBUS network.

Here, the DC supply to the communication modules is provided via the bus line of the INTERBUS Loop.
Two LEDs are located on the communication module to indicate the communication status.

General data and application conditions

Selectable drive profile	• Lenze device control • DRIVECOM profile "Drive technology 20"
Baud rate [kBit/s]	500
INTERBUS device	Slave
Network topology	Ring
Process data words (PCD) (16 bits)	2 words
Parameter data words (PCP) (16 bits)	Not supported
INTERBUS code (ID code)	Decimal: 179; hex: B3
Max. PDU length	4 bytes
Supported PCP services	None
Max. number of devices	36 Lenze inverters
Max. loop length	200 m
Max. distance between 2 devices	20 m
Electrical connection	Screw-type terminals
DC supply	Via the bus
Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: 0 ... +55ºC Transport: −25 ... +70ºC Storage: −25 ... +60ºC
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

LON

LON	Order ref.	EMF2141IB

The communication module enables the inverter to support the LONMARK "Variable Speed Motor Drive" functional (communication) profile.
- Two LEDs are located on the communication module to indicate the communication status.

- A configuration diskette for CANopen containing the description file for the devices and the plug-in for the LonMaker software is included in the scope of supply.

General data and application conditions

Communication medium	FTT - 10 A (Free Topology Transceiver)
Communication profile	LONMARK® Functional profile "Variable Speed Motor Drive"
Network topology	Free topology (line, tree/line, star, ring)
Possible number of nodes	64
Max. cable length	2700 m with bus topology (line) 500 m with mixed topology
Baud rate [kBit/s]	78
Electrical connection	Screw-type terminals

DC supply	• Internal
	• External
	  – required if a bus device is switched off or fails but communication with it is to be maintained
	  – supply via separate mains supply
	  – +24 V DC ± 10%, max. 120 mA per module

Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: 0 ... +55ºC Transport: –25 ... +70ºC Storage: –25 ... +60ºC
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

LECOM-AB (RS232/485)

LECOM-AB (RS232/485)	Order ref.	EMF2102IB-V001 [1]
LECOM-B (RS485)	Order ref.	EMF2102IB-V002 [1]

The communication modules enable the inverter to support the LECOM-AB V2.0 communication profile. The Lenze LECOM profile is completely open. Components which support this protocol are available for various systems (e.g. Simatic S5) in order to facilitate integration into a control system.

The LECOM-B communication module has an RS485 interface. In addition to the RS485 interface (see LECOM-B for data and operating conditions), the LECOM-AB communication module has an RS232 interface with a 9-pin SUB-D socket. Three LEDs are located on the communication modules to indicate the communication status.

General data and application conditions

Communication medium	RS485 (LECOM-B)	RS232 (LECOM-A)
Communication protocol	LECOM A/B V2.0	
Transfer character format	7E1: 7-bit ASCII, 1 stop bit, 1 start bit, 1 parity bit (even)	
Baud rate [Bit/s]	1200, 2400, 4800, 9600, 19200	
LECOM-B device	Slave	-
Network topology	Without repeater: line With repeaters: line or tree	Point-topoint
Max. number of devices	32 (= 1 bus segment) including host system With repeaters: 90 slaves	1
Max. cable length	1000 m per bus segment (depending on baud rate and cable type used)	15 m
Electrical connection	Screw-type terminals	SUB-D socket (9-pin)
DC supply	• Internal • External – required if bus devices are to be disconnected from the mains but communication with the master must be maintained – supply via separate mains supply – +24 V DC ± 10%, max. 60 mA per module (LECOM-AB: max. 80 mA)	
Insulation voltage to reference earth/PE	50 V AC	
Ambient temperature	Operation: 0 ... +55°C Transport: –25 ... +70°C Storage: –25 ... +60°C	
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

LECOM-LI (optical fibres)

LECOM-LI	Order ref.	EMF2102IB-V003 [1]
RS232/optical fibre converter Normal output power (0...40 m)	Order ref.	EMF2125IB
RS232/optical fibre converter High output power (10...66 m)	Order ref.	EMF2126IB

The communication module enables the inverter to support the LECOM-AB V2.0 communication module and interfaces the inverter with the host computer via an optical fibre converter.

Three LEDs are located on the communication module to indicate the communication status.

General data and application conditions

Communication medium	Optical fibres
Communication protocol	LECOM A/B V2.0
Transfer character format	7E1: 7-bit ASCII, 1 stop bit, 1 start bit, 1 parity bit (even)
Baud rate [Bit/s]	1200, 2400, 4800, 9600, 19200
LECOM-LI device	Slave
Network topology	Ring
Max. number of devices	52
Max. cable length per bus segment	0...40 m (normal output power)/10...66 m (high output power)
Electrical connection	Screw-type terminal and screw-type crimp connections
DC supply	• Internal • External – required if bus devices are to be disconnected from the mains, but communication with the master must be maintained – supply via separate mains supply – +24 V DC ± 10%, max. 70 mA per module
Insulation voltage to reference earth/PE	50 V AC
Ambient temperature	Operation: 0 ... +55°C Transport: –25 ... +70°C Storage: –25 ... +60°C
Climatic conditions	Class 3K3 to EN 50178 (without condensation, average relative humidity 85%)

Drive PLC – Description

The Drive PLC adds a freely programmable drive PLC to the 8200 vector frequency inverter.
This combination will not only control movement in your machine, but can also manage the distributed control functions. The system is programmed using the PLC languages of the international standard IEC 61131-3.

Why do you need a Drive PLC?

What benefits does the Drive PLC offer over a standard PLC?

• Reduction of parallel wiring and unnecessary terminals through an integrated system bus interface (CAN) to the 8200 vector frequency inverter
• Straightforward engineering through a special software library for simple integration of the 8200 vector into the PLC program
• Straightforward integration of most fieldbuses through plug-on modules
• A cost-effective system with extensive basic functions
• No additional costs for gateway functions to higher-level bus systems such as INTERBUS or PROFIBUS.
  The gateway function is automatically implemented in the system bus (CAN) by the operating system of the Drive PLC.

Lenze can offer a full automation system for your application, ranging from the operating and display units (keypads) to the geared motors.
As an additional bonus, Lenze can now save you time by providing the software that brings your machines to life from the basic configurations and technology functions, using the IEC 61131-3 languages you are already familiar with.

Lenze

Drive PLC – Description

Would you like to ...

- Rationalise the electrical part of your machine?
- Have more transparent PLC programs?
- Take the load off your bus system?
- Not have to keep learning new programming languages?
- Be able to implement drive-orientated control functions in the drive?
- Be able to use tried and tested systems for more complex drive solutions?

... then you should take a closer look at the Drive PLC.

This is because the Drive PLC can offer:

- Programming in the five IEC 61131-3 programming languages as well as high-performance CFC editor for simple graphic programming
- Continued complex drive technology solutions implemented via pre-configured technology functions
- The option of integrating the technology functions into the PLC program

... and this is what you get:

- Distributed control of your machine
- The electrical part of the machine becomes more cost-effective whilst maintaining the same level of performance

- Faster set-up times through the high-performance "Drive PLC Developer Studio" software development environment
- Increased availability due to the reduction in number of individual control components
- Less requirement for programming training: IEC 61131-3 is the international standard

Lenze will provide you with a freely programmable Drive PLC for the 8200 vector frequency inverter:
- Drive PLC as an expansion of the 8200 vector

The Drive PLC is programmed using a PC and the user-friendly Drive PLC Developer Studio software development environment. Please refer to the Lenze "Automation" catalog for further details.

Drive PLC – Technical data

Program memory	191 kB
Data memory	9.5 kB (1.3 kB marker +8.2 kB variables)
EEprom buffered memory	800 bytes
Residual memory	200 bytes
Task types	1 cyclical task 8 tasks (time or event-controlled)
Processing time for a bit operation	1.0 µs
Number of counters/timers	Freely selectable in accordance with IEC 1131
Digital inputs	8 (3 of which have interrupt capability)
Expandable	Via extension board and distributed terminals
Digital outputs	4 (1 A each)
Extendable	Via extension board and distributed terminals
Analog inputs	3 (± 10 V, 11-bit)
Analog outputs	1 (± 10 V or ± 20 mA, 11-bit)
Communication interfaces	Integrated system bus (similar to CANopen)
	Plug-on communications modules (e.g. INTERBUS, PROFIBUS-DP)
Dimensions (H x W x D) / [mm]	120 x 60 x 140
Operational reserve	In accordance with IEC 1131
Programming software	Drive PLC Developer Studio with IL, LD, SFC, ST programming languages, ST, IL, CFC, debugging and monitoring, visualisation
Voltage supply	+18 . . . 30 V DC
Current (at 24 V DC)	200 mA (without output loads)

Name	Order ref.
Drive PLC	EPL-10200

Required components for programming:

Name	Order ref.
Drive PLC Developer Studio BASIC	ESP-DDS1-B
Drive PLC Developer Studio PROFESSIONAL	ESP-DDS1-P
PC system bus converter (voltage supply via keyboard with DIN connection)	EMF2173IB
PC system bus converter (voltage supply via keyboard with PS2 connection)	EMF2173IB-V002
System cable R232 (0.5 m)	EWL0048
System cable R232 (5.0 m)	EWL0020
System cable R232 (10 m)	EWL0021

Note:
The Drive PLC is programmed on the PC via the system bus.

Lenze

Drive PLC – Mechanical installation

- Designed to be installed in a cabinet.
- If the exhaust air contains pollutants (dust, lint, grease, aggressive gases) then appropriate counter-measures must be in place (e.g. installation of filters, regular cleaning etc.).
- Ensure there is enough mounting space.
  - Several units can be mounted directly adjacent to one another without clearance.
  - Make sure that there is free access for cooling air and that the outlet for used air is not blocked.
  - Ensure a clearance of 100 mm above and below.
- In the event of continuous oscillations or vibrations, check the use of vibration dampers.

The Drive PLC can be fitted as follows into a control cabinet:

- With the enclosed **standard fixtures** (included in the scope of supply)
- With a **swivel bracket** (accessories)
- With **DIN rail fixtures** (accessories)

Tip:
E82ZWEK (with bracket) or E82ZWES (with clamp) fixings can be used (accessories) for quick and easy installation.

Drive PLC – Mechanical Installation

Mounting with a swivel bracket/side mounting
On housings with a shallow installation depth the Drive PLC can be mounted with a swivel bracket. The Drive PLC can be swivelled out sideways, e.g. through 90°, for

installation, adjustment and diagnostic purposes (locking mechanisms at 45°, 90°, 135°, 180°). The swivel bracket can also be used for fixed sideways mounting.

Terminal extension for system bus (CAN)

Order reference:	EMZ9374IB

The terminal extension serves to add extra digital input and output terminals to the system bus network. All 8 terminals are freely programmable as inputs or outputs. The reaction time of the terminals is 1-2 ms.

Overview

A	DIP switch for configuring the terminal extension
B	12-pin terminal strip for connecting inputs/outputs and the supply voltage
	I/O1…I/O8 connection for digital inputs and digital outputs
	OUT 24 V +18…+30 V DC output voltage for digital outputs
	(always operate the terminal via emergency stop)
	24 V +18…+30 V DC supply voltage
	GND Minus voltage supply, reference potential
C	Yellow status LED for inputs/outputs I/O1…I/O8 • LED ON: Input/output is set • LED OFF: Input/output is not set
D	Diagnostic LED
E	3-pin terminal strip for connecting the system bus (CAN) HI System bus HIGH LO System bus LOW GND Reference potential
F	PE connector for the PE connection

Technical data

Electrical connection	Supply voltage	+18…+30 V DC				
	Current requirement	80 mA at +24 V DC				
Digital outputs	Features	• No electrical isolation • Short-circuit-proof				
	Current per output	max. 1 A				
	Total current of all outputs	max. 4 A				
	HIGH level	+13…+30 V DC				
	LOW level	0…+5 V DC				
Digital inputs	Features	No electrical isolation				
	Input resistance	3 kΩ…4 kΩ				
	HIGH level	+13…+30 V DC				
	LOW level	0…+5 V DC				
System bus (CAN)	Communication profile	Similar to CANopen (CIA DS301) (compatible with Lenze automation components)				
	Communication medium	DIN ISO 11898				
	Network topology	Line (terminated at both ends with 120 Ω)				
	System bus device	Slave				
	Max. number of devices	63				
	Baud rate [kBit/s]	50	125	250	500	1000
	Max. bus length [m]	1000	500	250	80	25
Mounting	on DIN rail					
Dimensions	H x B x D [mm] 101 x 25 x 98 (incl. terminal strip)					

Process visualisation

Lenze's graduated range of displays can provide you with high-quality powerful products suitable for universal use. They offer high levels of user-friendliness and functionality which is reflected in their design. They provide a variety of functions:

- Display of text, images, bar graphs, bitmap images and animated graphics [1]
- Recipe management [1]
- Saving of data with access protection with password allocation
- Display of system messages
- Display of alarm messages [1]
- Communication via system bus
- Transparent bilingual parameterisation software
- Mathematical functions [1]
- Automatic operations [1]
- Real-time clock
- Windows fonts

Select the accessories for your application on the following pages. The drive can be integrated into any type of application using the numerous accessories. RFI filters. mains chokes and mains filters are available to ensure adherence to EMC limiting values. Motor filters provide protection for motors whose isolation systems are not suitable for inverter operation. The combination of motor filters and RFI filters enables the inverters to be used in applications with long motor cables. Brake choppers, brake modules and brake resistors for converting braking energy into heat are available for braking large loads and

for dynamic applications. Lenze can provide a system of DC fuses and DC busbar systems to provide cable protection even in DC bus operation. The DC fuses have been designed for use with the 8200 vector.

General

A mains choke is an inductive resistor which can be connected between the mains supply and the frequency inverter.
Function:
– Less effects on the mains – the wave form of the mains supply is a closer approximation of a sine wave.
– Reduced mains current – reduction of the r.m.s. current (i.e. reduction of mains, cable and fuse load).
– Increased service life of the 8200 vector – The service life of electrolytic capacitors in the DC bus can be increased considerably by reducing the AC load.

Note:
– Mains chokes can be used without restrictions in conjunction with RFI filters and/or motor filters.
– A mains filter (combination of inductance and RFI filters in one housing) replaces the function of a mains choke (mains filters available for the 8200 vector, 15.0…90.0 KW).
Please note:
– Some 8200 vector frequency inverter models must always be equipped with a mains choke (see [1] and [2] in the selection table)
– When using a mains choke, the maximum possible output voltage does not reach the value of the mains voltage – the typical mains voltage drop at the rated value is around 6%.

Mains chokes (0.25 kW...90 kW)

General

Every frequency inverter produces noise emission as a result of internal switching processes, which can impair the function of other equipment.
Limits for this type of interference are specified in European Standard EN 55011 depending on the operating location of the frequency inverter:

Threshold class A
Threshold class A is often required for industrial networks operating separately from mains supplies in domestic areas.

Threshold class B
If the frequency inverter is operated in a domestic environment, this may cause interference to other devices (e. g. radio and television sets). RFI filters in accordance with EN 55011, threshold B, often have to be used to counter this risk. Threshold class B is considerably more stringent than threshold class A. Threshold class B incorporates threshold class A.

Appropriate measures for reducing noise emission must be put in place to ensure that the device conforms to threshold class A or B. The selection of the frequency inverter and (if required) the corresponding filters always depends on the particular application, and is determined by various factors, including the operating frequency of the 8200 vector and the length of the motor cable or the protective circuit (e.g. residual current circuit-breaker).

Power	Type 8200 vector	Type of filter	Max. permissible motor cable length [1] for conformance with	
			Threshold class A	Threshold class B
0.25 … 11.0 kW	E82EV251KxC to E82EV113KxC	integrated	20 m	[1]
0.25 … 0.75 kW	E82EV251K2C to E82EV751K2C	Footprint/built-on RFI filter LL[5] (accessory)	5 m	
0.25 … 11.0 kW	E82EV251KxC200 to E82EV113KxC200	Footprint/built-on RFI filter SD[3] (accessory)	20 m	
		Footprint/built-on RFI filter LD (accessory)	50 m	
		Footprint/built-on RFI filter LD (accessory) + Motor filter[4] (accessory)	200 m	100 m
15.0 … 90.0 kW	E82EV153K4B3xx to E82EV903K4B3xx	Footprint/built-on mains filter[2] (accessory)	50 m	10 m
	E82xV153K4B201 to E82xV553K4B201	Built-on mains filter[2] (accessory)	25 m (mains filter A)	50 m (mains filter B)
	E82xV753K4B201 to E82EV903K4B201	Footprint/built-on mains filter[2] (accessory)	25 m (mains filter A)	50 m (mains filter B)

[1] Motor cable depends on the type of 8200 vector used and its operating frequency.
[2] Operation with increased rated power depends on the type of controller used
[3] SD (Short Distance) RFI filters are designed for operation at 30 mA RCCB (low leakage current) (guide value: Motor cable length = 10 m)
  The residual current circuit-breaker may be triggered erroneously due to
  • capacitive compensating currents in the cable shield during operation
  • simultaneous switching on of several inverters on the network
[4] Please note the general data and application conditions of the motor filter (see page 4-24)
[5] For non-fixed systems: Discharge current < 3.5 mA

Lenze

Footprint RFI filters threshold class A and B (0.25 kW … 2.2 kW)

The RFI filter reduces mains-bound noise emission into the mains network, thus ensuring that threshold class A or B is satisfied. The filter does not replace the function of the mains choke. In order to reduce the r.m.s. current it is also necessary to install an additional mains choke. The structure of the RFI filters enables them to be mounted below or next to the 8200 vector.

Three different types of filter are available:
- **RFI filters LL (Low Leakage)** with leakage current < 3.5 mA for 5 m motor cable for 230 V/1 ph are used for installation in non-fixed systems
- **SD RFI filter** (Short Distance) with low leakage current, e.g. for use on a 30 mA fault current protection switch
- **LD RFI filter** (Long Distance) for use with long motor cables

Important: Only use the RFI filters in conjunction with the 8200 vector, types E82EVxxxKxC**200**.

General information

Motor filters should be used to reduce the load on the motor windings, as well as to reduce the capacitive leakage currents to PE that may be caused by the use of long motor cables.

Motor filters ensure the reliable operation of the 8200 vector with motor cable lengths of up to 200 m.

A motor filter is required:
– if very long motor cables are used
  (in addition to conforming with EMC limit values).
– in conjunction with LD RFI filters (0.25…11.0 kW) for the reduction of line-bound noise emission, if very long motor cables are used in order to conform with EMC threshold class A or B (see page 4-14).
– if motors are used with an insulation system not suited for inverter operation. Lenze motors feature insulation with a high thermal reserve.
Please note:
– The voltage drop at the motor filter at the rated current of the motor filter and a frequency inverter of 50 Hz is typically around 2-3% of the max. output voltage of the 8200 vector.
– If present, terminals +UG and –UG must be connected with the same cable cross-section as the motor cable.

Motor filter connection

Schematic diagram for the 8200 vector, 230 V

Schematic diagram for the 8200 vector, 400/500V [1]
[1] Motor filters with 400/500 V mains voltage: In order to maintain the specified characteristics (e.g. limitation of the overvoltage), the voltage increases on the motor cable are routed via the DC bus of the 8200 vector (+UG, -UG). In this case, it is permissible for the motor filter to be used in DC bus operation.

General data and application conditions for motor filters used with the 8200 vector (0.25 … 11.0 kW)

Motor filter always required a motor cable length of	• 50 m shielded (low-capacitance) • 100 m unshielded [1]
Max. motor cable length	• 100 m shielded (low-capacitance) • 200 m unshielded [1]
Protection of the motor coil	du/dt ≤ 500 V/µs
Limitation of motor overvoltage	< 1 kV
Max. mains voltage	264 V +0% or 550 V +0%
Temperature range	0...40°C
Connection type	Contact-proof screw terminals
Degree of protection	IP 20
Operating conditions for the 8200 vector in conjunction with a motor filter	• Maximum output frequency: 480 Hz • Maximum operating frequency: 8 kHz • Operating mode: V/f characteristic control (linear or quadratic)

[1] When using unshielded motor cables, only line-bound noise emission EMC requirements have to be met

Lenze
General information

External brake resistors are required to brake high moments of inertia or for extended generator mode operation. The brake resistor converts mechanical braking energy into heat.

The brake transistor (0.25 … 11.0 kW) integrated in the 8200 vector frequency inverter or the corresponding brake chopper connects the external brake resistor when the DC bus voltage exceeds a certain switching threshold. This prevents the frequency inverter from setting a pulse inhibit because of an overvoltage, which would cause the drive to coast to standstill. Braking is always controlled when using an external brake resistor.

Selection of brake resistors

The Lenze brake resistors recommended in the tables are appropriate for each frequency inverter (related to approx. 150 % generative power). They are suitable for most applications.

For special applications, e.g. centrifuges, materials handling systems etc., the suitable brake resistor must meet the following requirements:

Brake resistor requirement	Application	
	with active load	with passive load
Continuous power [W]	$\geq P_{max} \cdot \eta_e \cdot \eta_m \cdot \dfrac{t_1}{t_{cycl}}$	$\geq \dfrac{P_{max} \cdot \eta_e \cdot \eta_m}{2} \cdot \dfrac{t_1}{t_{cycl}}$
Thermal capacity [Ws]	$\geq P_{max} \cdot \eta_e \cdot \eta_m \cdot t_1$	$\geq \dfrac{P_{max} \cdot \eta_e \cdot \eta_m}{2} \cdot t_1$
Resistance [Ω]	$R_{min} \leq R \leq \dfrac{U_{DC}^2}{P_{max} \cdot \eta_e \cdot \eta_m}$	

Active load	Can move by itself without any influence from the drive (e.g. materials handling systems, unwinders)
Passive load	Stops by itself without any influence from the drive (e.g. horizontal traversing drives, centrifuges, fans)
U_{DC} [V]	Threshold for brake transistor or brake chopper
P_{max} [W]	Maximum braking power defined by the application
η_e	Electrical efficiency (frequency inverter + motor) Guide values: 0.54 (0.25 kW) … 0.95 (90 kW)
η_m	Mechanical efficiency (gearbox, machine)
t_1 [s]	Braking time
t_{scan} [s]	Cycle time = time between two subsequent braking cycles (= t1 + break time)
R_{min}	Smallest permissible brake resistance (see rating for the integrated brake transistor)

Brake chopper and brake module (15.0 kW ... 90.0 kW/400 V)

A brake resistor is connected to the 8200 vector frequency inverter, 15.0...90.0 kW via the brake chopper EMB9352-E (available as accessory), which is then coupled to the frequency inverter DC bus voltage (+UG, -UG terminals).

The brake module EMB9351-E (available as an accessory) with integrated brake resistor can be used for low braking power. The brake choppers and brake modules can be connected in parallel in combination.

General data and application conditions (EMB9351-E and EMB9352-E)

Conformity	CE	Low voltage directive (73/23/EEC)
Approvals	UL 508C	Underwriter Laboratories (File No E132659) Power conversion equipment
Vibrational stability	Accelerational stability up to 0.7g (Germanischer Lloyd, general conditions)

Connecting a brake resistor

Schematic diagram (example: 0.25 ... 11.0 kW)
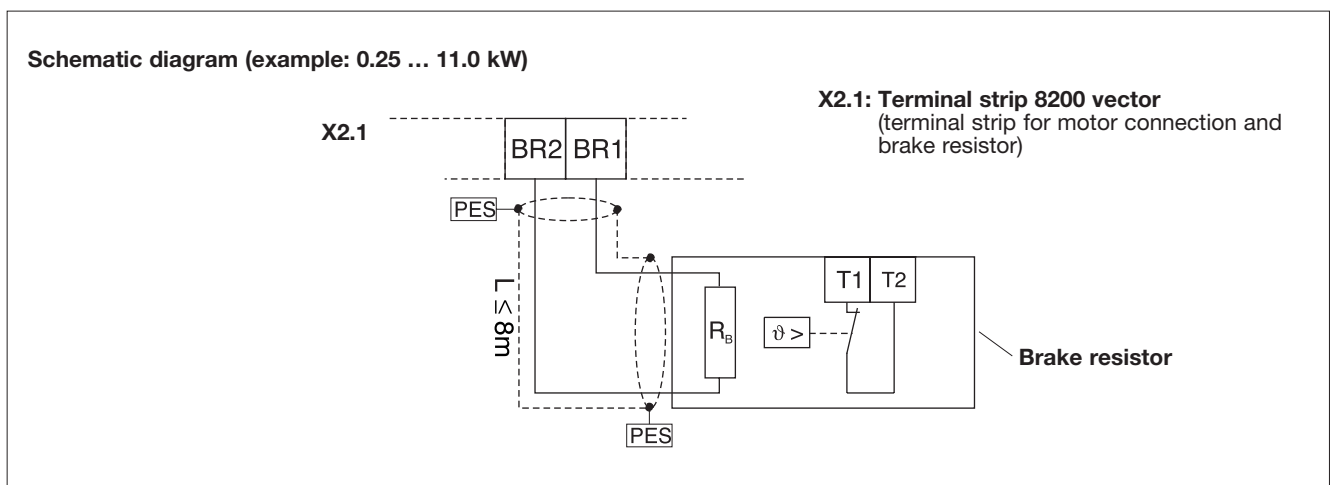

1, 2: Resistor
3, 4: Temperature monitoring (temperature switch/opener) to be integrated for example into the locking of the relevant mains supply protection

Brake rectifiers

Lenze three-phase motors and G-motion geared motors
can be fitted with spring applied brakes.
A brake rectifier is required for the DC supply of the
electromechanical motor brake (180 V DC, 205 V DC).
The brake rectifier has an integrated spark suppressor for
protecting the switch contacts.

The selection of the brake rectifier is made depending on
the input voltage U_{AC} and the rated brake coil voltage (U_{coil}):

Braking rectifier	Type ref./order ref.	Max. input voltage U_{AC}	Rated voltage U_{DC} (V)	Max. output voltage	Selection example
Bridge one-way rectifier	E82ZWBR1	270 V +0%	$U_{DC} = 0.9 \times U_{AC}$	0.75 A	$U_{coil} = 205\ V_{DC} = U_{DC}$ at $U_{AC} = 230$ V
6-pin half wave rectifier	E82ZWBR3	460 V +0%	$U_{DC} = 0.45 \times U_{AC}$	0.75 A	$U_{coil} = 180\ V_{DC} = U_{DC}$ at $U_{AC} = 400$ V

Note:
Lenze gearboxes and three-phase brake motors are supplied as standard with a **4-pin** brake rectifier.
These brake rectifiers are designed for **AC-controlled** switching of the brake.

E82ZWBR3 = half wave rectifier
Type 14.630.33.016

E82ZWBR1 = bridge rectifier
Type 14.630.32.016

Activation of the brake

The brake is either DC or AC-controlled. The delay times are significantly reduced if the brake is DC-controlled. This makes it possible, for example, to brake the motor with a reproducible stopping distance. DC-controlled switching requires a spark suppressor to protect the switch contacts and the coil. The spark suppressor is integrated into the 6-pin brake rectifiers.

We recommend that the relay output [1] of the 8200 vector frequency inverter is used to switch the brake. Alternatively, the brake can also be controlled via an external control contact (e.g. PLC). The following table lists the available options for Lenze brakes. The information relates to a mains rating of 230/400 V +/–10 %.

Brake coil voltage rating	Type of rectifier	Brake size (braking torque [Nm])		
		06 (4.0)	08 (8.0)	10 (16.0)
		Corresponding motor frame size		
		063/071	080/090	090/100
180 V	Half wave	• AC-controlled switching via the relay output of the 8200 vector only permitted with additional auxiliary relay • DC-controlled switching or direct switching of a DC voltage via the relay output of the 8200 vector only permitted with additional auxiliary relay		
205 V [4]	Bridge	• AC-controlled switching permitted via the relay output of the 8200 vector • DC-controlled switching or direct switching of a DC voltage permitted via the relay output of the 8200 vector		
24 V [2]	Not required	• Direct switching of a DC voltage permitted via the relay output of the 8200 vector rectifier		

Brake coil voltage rating	Type of rectifier	Brake size (braking torque [Nm])					
		12 (32.0) [3]	14 (60)	16 (80)	18 (150)	20 (240)	25 (360)
		Corresponding motor frame size					
		100	112/132	132/160	160/180	180/200	200/225
180 V	Half wave	• AC-controlled switching via the relay output of the 8200 vector only permitted with additional auxiliary relay • DC-controlled switching or direct switching of a DC voltage via the relay output of the 8200 vector only permitted with additional auxiliary relay					
205 V	Bridge	• AC-controlled switching via the relay output of the 8200 vector • DC-controlled switching or direct switching of a DC voltage via the relay output of the 8200 vector only permitted with an additional auxiliary relay					
24 V [2]	Not required	• Direct switching of a DC voltage only permitted via the relay output of the 8200 vector with an additional auxiliary relay					

[1] Technical data for the relay output of the 8200 vector: see page 2-6. The service life of the relay depends on the type of load and the connected power.

[2] DC-controlled switching requires a spark suppressor to protect the switching contact and the coil.

[3] At a brake coil voltage rating of 205 V and 24 V, a DC voltage may be switched directly via the relay output of the 8200 vector on inverters with ratings of 15 kW and higher.

[4] On 8200 vector types E82EV251K2Cxxx and E82EV371K2Cxxx, DC-controlled switching or direct switching of a DC voltage via the relay output is only permitted with an additional relay.

Activation of the brake

The relay must be programmed before the relay output of the 8200 vector frequency inverter can activate the electromechanical motor brake.

Example: Release/application of the brake (205 V) when an adjustable frequency threshold is exceeded/undercut. In this case the braking process can be initiated via a digital signal which leads to a quick stop of the drive.

(Programming: Use relay C0008 = 7, frequency threshold (Qmin) C0017 = 3 Hz; relay terminals K12, K14 at terminal strip X1 of the 8200 vector)

DC fuse

Two ranges of fuses are required to provide DC fuses for the entire power range of the drive controller. Fuse size 14*51 mm covers the rated current range from 6 to 40 A and fuse size 22*58 mm covers the range from 12 to 100 A. Only fuse holders of the same size may be interconnected via DC busbars. DC currents above 100 A can be implemented by connecting 22*58 mm DC fuses in parallel. The 8200 vector range is suitable for operation with 120% overload.
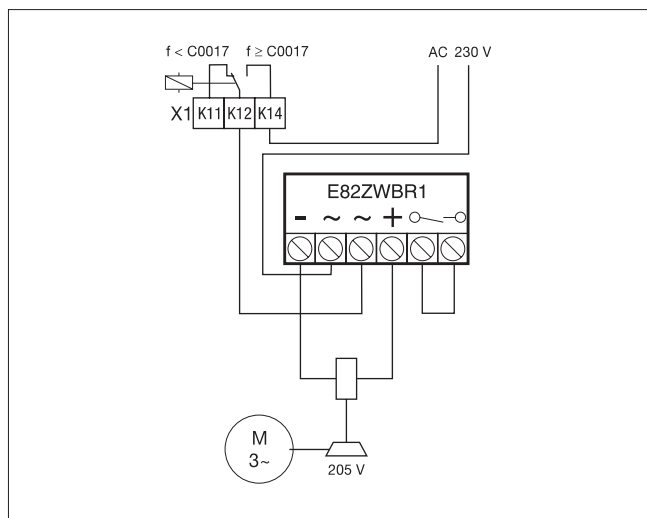

Note: A DC busbar system is available for each fuse range. At average supply levels, the current capacity I = 200 A. The busbar system for the 22*58 mm fuse range can be fitted with 14*51 mm range fuse holders. The 2-pin 14*51 mm must be extended for this purpose and the pins may need to be removed. This restricts the contact protection.

Lenze offers a DC busbar system - EWZ 0036 - for DC fuses 22*38 mm with and without alarm contact.

Fuse holder 14*51 mm	
Name	Order ref.
Fuse holder, 2-pin, without signalling device [1]	EFH20005
Fuse holder, 1-pin, with signalling device [2,3]	EFH10005

Fuse holder 22*58 mm	
Name	Order ref.
Fuse holder, 2-pin, without signalling device [1]	EFH20007
Fuse holder, 1-pin, with signalling device [2,3]	EFH10004

Miscellaneous accessories [2]	
Name	Order ref.
DC busbar for 14*51 mm, 1m	EWZ0036
DC busbar for 22*58 mm, 1m	EWZ0037
Fuse-link contacts for DC busbar (unit packs of 10)	EWZ0038
1-pin terminal for internal supply of busbars for 14*51 and 22*58 mm [4]	EWZ0039

[1] UL approval only for AC operation.
[2] The 14*51 and 22*58 mm fuse-links with signalling device, fuse holders with signalling device and accessories do not have UL approval.

[3] Two fuse holders are needed for each.
[4] The terminal provides a simple way of connecting a central power supply to the busbar system and of connecting busbar systems. Two terminals are required in each instance.

Lenze

Setpoint potentiometer

Speed can be preselected through an external potentiometer (setpoint preselection or field frequency preselection).

For this purpose, the setpoint potentiometer can be connected to terminals 7, 8 and 9 of the standard I/O module. A scale and a rotary knob are also available.

Name	Order ref.	Data	Dimensions
Setpoint potentiometer	ERPD0001k0001W	1 kΩ/1 Watt	6 mm x 35 mm
Rotary knob	ERZ0001		36 mm diameter
Scale	ERZ0002	0...100%	62 mm diameter

Digital display

A voltmeter can be connected to the analog outputs to display the output frequency or the motor speed.

Name	Order ref.	Measuring ranges	Mounting cut-out	Mounting depth
Voltmeter 3 1/2 digits	EPD203	0 - 6 V 0 - 20 V 0 - 200 V	91 mm x 22.5 mm	81.5 mm

Lenze

EMC shield support

The EMC shield support is available to speed up and facilitate the mounting of shielded control cables.
A shield sheet and clips are supplied with the frequency inverter. The angular design means that the control cable can take the shortest route possible from the inverter into the cable channel without bending the cable excessively. More detailed information about EMC installation can be found in the System Manual (see page 6-3).

Type	Name	Order ref.
E82xV251KxCxxx to E82xV371KxCxxx	EMC shield support	E82ZWEM1
E82xV551KxCxxx to E82xV222KxCxxx	EMC shield support	E82ZWEM2
E82xV302KxCxxx to E82xV112KxCxxx	EMC shield support	E82ZWEM3

PTC kit

The PTC kit must be used if you are using unshielded PTC cables in the motor cabling. In addition to the EMC shield support, the frequency inverter is also supplied with a PTC module.

The PTC module replaces a ferrite core installed in the PTC cable. Pre-assembled terminal connectors enable the PTC module to be installed quickly and easily.

Type	Name	Order ref.
E82xV251KxCxxx to E82xV371KxCxxx	PTC kit	E82ZPE1
E82xV551KxCxxx to E82xV222KxCxxx	PTC kit	E82ZPE2
E82xV302KxCxxx to E82xV112KxCxxx	PTC kit	E82ZPE3

Plug connector for function modules

The plug connector connects the function module to the inverter. The plug connector is supplied with the 8200 vector inverter.

Plug connector	Order ref.	E82ZJ011

Application examples | 8200 vector

5

Preselection of setpoints via potentiometer

The setpoint for the 8200 vector frequency inverter is selected using a (rotary) potentiometer. The frequency inverter is started and stopped via a digital signal.
Required accessories for the 8200 vector:
– Standard I/O or Standard I/O PT function module
– Setpoint potentiometer (1 k...10 k)
– Keypad

Tip: The setpoint potentiometer, rotary knob and scale are available as accessories (see page 4-44)

Terminal assignment on the Standard I/O function module:

Terminal assignment:
7, 8, 9: Potentiometer connection
28: Digital signal for START/STOP

Sequence diagram:

1) Adjustable acceleration ramp
2) Adjustable downward ramp
28 Terminal 28 (start/stop)
8 Terminal 8 (setpoint)
f Output frequency

Preselection of fixed setpoints

The setpoint for the 8200 vector frequency inverter is selected via three fixed setpoints (JOG). Here, the three setpoints are entered once in the 8200 vector using the keypad. These setpoints are then activated via two digital signals. The frequency inverter is started and stopped via a further digital signal.

Required accessories for the 8200 vector:
– Standard I/O or Standard I/O PT function module
– Keypad

Terminal assignment on the Standard I/O function module:

Terminal assignment:
28: Digital signal for START/STOP
I1, I2: Digital signals for activation of the fixed setpoints JOG1, JOG2, JOG3
(e.g. 20 Hz, 30 Hz, 40 Hz)

Sequence diagram:

1) Adjustable acceleration ramp
2) Adjustable downward ramp
28 Terminal 28 (start/stop)
I1 Terminal I1 (activation of JOG1)
I2 Terminal I2 (activation of JOG2)
   JOG fixed setpoint
f   Output frequency

Lenze
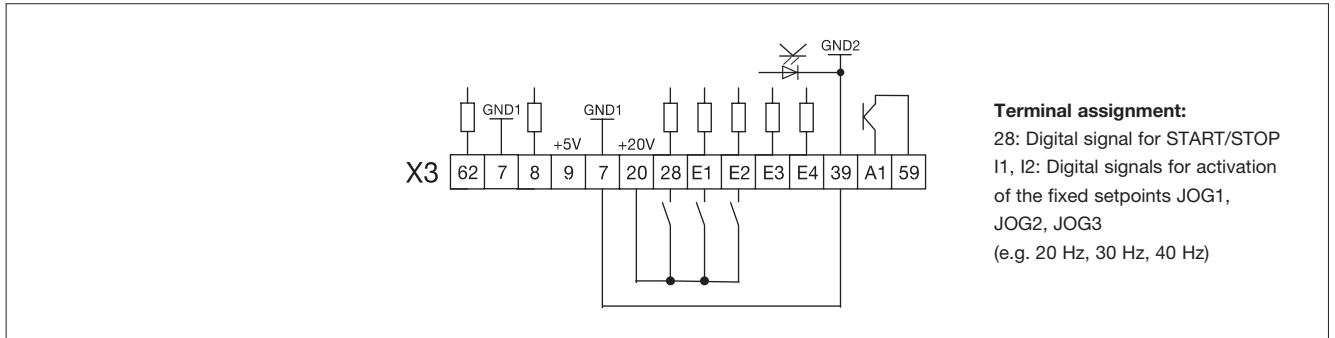

Setpoint preselection via the UP/DOWN function

The setpoint for the 8200 vector frequency inverter is selected via two digital signals (UP and DOWN) (fail-safe). The signals can be generated for example with a simple pushbutton. The frequency inverter is started and stopped via a further digital signal.

Required accessories for the 8200 vector:
– Standard I/O or Standard I/O PT function module
– Keypad

Terminal assignment on the Standard I/O function module:
Terminal assignment:
28: Digital signal for START/STOP I1, I2: Digital signals for setpoint preselection (UP/DOWN) via pushbutton

Sequence diagram:

2) Adjustable downward ramp
28 Terminal 28 (start/stop)
I1 Terminal I1 (setpoint preselection)
I2 Terminal I2 (setpoint preselection)
f Output frequency

Lenze

Preselection of setpoints via the keypad

The setpoint for the 8200 vector frequency inverter is selected via the ⬥ and ⬦ keys on the keypad. A reversal of the direction of rotation is possible here. The frequency inverter is started and stopped via the **RUN** and **STOP** keys.

Required accessories for the 8200 vector:
– Keypad

**Selection of the setpoint:**

The setpoint is selected using [Set]

⬅ [Set]

⬥ 0....+50 Hz ⇨ ⟳

⬦ 0....- 50 Hz ⇨ ⟲

function Note:
The setpoint is saved when the mains is connected

2) Adjustable downward ramp
⬥ Setpoint preselection via z key
⬦ Setpoint preselection via ⬦ key
f Output frequency

Rotational speed control

Rotational speed control with an inductive single-track 3-wire sensor.
The aim of the rotational speed controller is to count the error of the actual rotational speed from the setpoint speed, which arises as a result of the effects of loads (motive and generative) on the system. The inductive sensor measures the rotational speed by sensing for example a gear wheel, a metallic fan wheel or a cam. This inductive sensing can take place either directly on the motor or inside the machine.

Utilised functions
- Internal process controller for rotational speed control
- Input of rotational speed setpoint, e.g. via a keypad.
- Actual rotational speed value as a sequence of pulses via a digital input (configured as a frequency input).
- DC braking if the setpoint drops below an adjustable threshold.

Rotational speed control with a 3-wire sensor.

Example: Wiring of the Standard I/O function module in the 8200 vector
① Setpoint input via keypad
② 3-wire sensor

Further details about this application example can be found in the System Manual for the 8200 vector.

Tip:
Lenze three-phase AC motors and Lenze geared motors can be supplied with the Lenze pulse encoder ITD21 (512/2048 increments, HTL output signals). This enables **two-track** rotational speed feedback (tracks A and B) to be set up for the Application I/O function module.

Pressure control

A centrifugal pump (square load characteristic) is to maintain constant pressure in a pipe system (e.g. water supply for private households or industrial plants).

Application conditions
- PLC operation (preselection of the pressure setpoint, night-time pressure reduction)
- On-site set-up is possible
- During the night the pressure is reduced, and the pump then operates at an unregulated, low constant speed.
- Under no operating circumstances must the pump be operated at an output frequency of less than 10 Hz (running dry)
- Avoidance of pressure surges in the water network
- Avoidance of mechanical resonance at an output frequency of approx. 30 Hz
- Overheating protection for the motor
- Collective fault messaging to the PLC
- On-site display of readiness for operation and the actual pressure value
- On-site facility for stopping the pump

- Required drive components:
  – Lenze geared motor / three-phase AC motor
 – 8200 vector frequency inverter with Application I/O function module

Utilised functions
- Internal process controller for the pressure control
  – pressure setpoint from the PLC (4 ... 20 mA)
  – actual pressure reading from the sensor (0 ... 10 V)
- Hand/remote switchover for on-site set-up
  – hand: pressure setpoint entered via a pushbutton with motor potentiometer function (UP/DOWN)
  – remote: pressure setpoint from the PLC
- Fixed speed (JOG) for pressure reduction during the night (activated via the PLC)
- Protection against running dry (setpoint-independent minimum speed)
- Smooth and jerk-free starting action with S-ramps
- Masking of mechanical resonances with a cancelling frequency
- PTC motor monitoring
- Trip error message via a digital output
- Readiness for operation signalled via a relay output
- Configurable analog outputs for actual pressure value
- Electronic security lock

5

Basic circuit for a pressure control system

Example: 8200 vector, 400 V
② Mains contactor
③ Analog display instrument for actual pressure values
④ External mains supply
⑤ 2-wire pressure sensor
⑥ 3-wire pressure sensor
⑦ Pump
⑧ Lamp on = ready for operation
⑤, ⑥: only use one pressure sensor

Further details about this application example can be found in the System Manual for the 8200 vector.

Lenze

Dancer positioning control

Dancer position control is used in ongoing processes to give constant material tension. In the example described, the continuous material speed v_2 is synchronised with the line speed v_1.

Required drive components
– Lenze geared motor/three-phase AC motor
– 8200 vector frequency inverter with Application I/O function module

Utilised functions
- Internal process controller as a position controller.
- Preselection of the line speed v_1 via analog inputs at the function module (terminal 1U).
- Actual dancer position value from the dancer potentiometer via an analog input at the function module (terminal 2U).
- Set-up speed via digital input at the function module (fixed speed/JOG via E3).
- Shut-off of the dancer controller via X3/E4 (external), also possible internally via an adjustable frequency threshold.

Basic circuit for a dancer position control system

Example: 8200 vector, 400 V
② Mains contactor
③ Master setpoint ~V_1
④ Dancer potentiometer

Further details about this application example can be found in the System Manual for the 8200 vector.

Lenze

In the operating mode "V/f characteristic control" it is possible to connect several motors in parallel to the 8200 vector.
The total sum of the individual motor power ratings must not exceed the current rating of the 8200 vector.

Installation information
- The wiring is connected in parallel, e.g. in a terminal box.
- Every motor must be equipped with a temperature switch (NC contact), which is connected in series to X2/T1 and X2/T2.
- Resulting motor cable length:

$$l_{res} = \text{Sum of all motor cable lengths} \times \sqrt{\text{number of motor cables}}$$

Basic design of a drive group
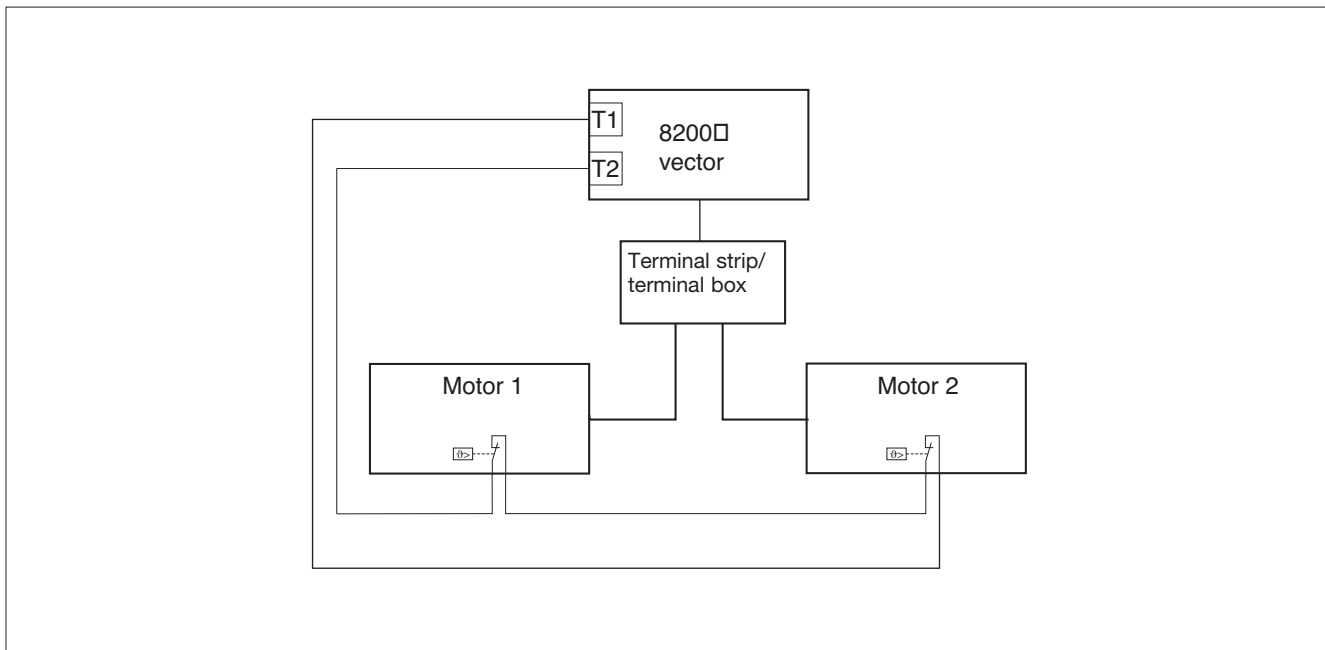

5

Further details about this application example can be found in the System Manual for the 8200 vector.

Lenze

Two refrigeration compressors supply several cooling consumers, which are switched on and off at irregular intervals.

Conditions
- Compressor 1 is regulated with an 8200 vector.
- Compressor 2 has a fixed connection to the network and is switched on or off by the 8200 vector depending on the cooling requirements.
- The selection of the pressure setpoint of the refrigeration process is fixed in the 8200 vector.

Utilised functions
- Controller release/inhibit function for starting and stopping
- Internal process controller for pressure control
- Fixed frequency
- Programmable relay output K1
- Adjustable switching thresholds
- Parameter set transfer

The principle of sequential switching
Tip:
When using the Application I/O function module, time delays at relay output K1 may render the otherwise necessary external time delay element unnecessary – the time delay element prevents compressor 2 from switching on during temporary fluctuations in actual value.

Further details about this application example can be found in the System Manual for the 8200 vector.
Application examples

Setpoint summation

Conveyor systems, pumps etc. are often operated at a basic speed which can be increased as required. Here, the speed is implemented by the 8200 vector by preselection of a master setpoint and an additional setpoint. These setpoints may originate from different sources (e.g. PLC and setpoint potentiometer).

The 8200 vector adds the two analog setpoints and then increases the speed of the motor accordingly. The upward and downward ramps for both setpoints are variable and can be adjusted to ensure smooth acceleration. In addition, the master setpoint ramps can be set to an S-shape.

Block diagram for setpoint summation

Further details about this application example can be found in the System Manual for the 8200 vector.

Lenze

Power control (torque limitation) is used for example to ensure a constant flow of mass when media which change their specific gravity are moved – usually air at different temperatures. Here, a torque limit (M) and a rotational speed setpoint (f) are preselected for the 8200 vector.

Automatic adaptation of the rotational speed ensures that the torque limit is adhered to when the specific gravity changes, provided that the value of the rotational speed setpoint is selected high enough to not have a limiting effect.

The principle of power control demonstrated with a fan

Further details about this application example can be found in the System Manual for the 8200 vector.

Service – you can trust

For us, sevice is more than just supporting the use of our drives. The Lenze system approach begins with your enquiry. Next you get technical information and advice from the Internet and a network of sales outlets staffed by knowledgeable engineers. If you need it, we follow with training, commissioning, maintenance and repair.

With passion

The Lenze team doesn't just offer the necessary manpower an technical know-how – we are passionate and meticulous about what we do. We'll only be happy once you are entirely satisfied with our work. Our team of professionals provides assistance over the telephone or on-site, ensures the express delivery of spare parts and carries out repairs with incredible urgency. We're fast and reliable.

Someone to talk to

Should you come across a real problem, we can provide live assistance. Your local sales office is staffed with product trained engineers who can give expert advice. Technical support and service is available, even outside normal office hours. Check our website for contact numbers.

Around the world

Our products are available for speedy delivery worldwide. Lenze companies, Lenze factories and sales agencies are based in major industrial countries around the world. Contact them through our website www.lenze.com, which also gives you 24 hour access to technical instructions and product manuals. Local support, on-site if you need it, is available.

Technical documentation

The documentation for the 8200 vector contains
supplementary information about the inverter and the
various function and communication modules.
The manuals are divided into clear sections, enabling you
to find the information you need quickly and easily. All
manuals are bound in ring binders.

Lenze

Other product catalogs

Lenze manufactures state-of-the-art electronic drives and geared motors from DC and frequency inverters to servo technology, small drives, clutches and brakes, which are in use all over the world. Why not find out more?

Automation
Hardware and software components for distributed automation

Motor inverters
The IP 65 inverter directly on the drive, 0.25 - 7.5 kW

Frequency inverters
Standard or vector control up to 400 kW

Geared motors
Industrial geared motor ranges suiting market requirements up to 45 kW

Three-phase AC motors
Standard motors in B3, B14 or B5 up to 22.0 kW

Servo drives
4 different technology functions, 0.75 to 75 kW

Servo motors
Synchronous motors up to 6.0 kW, asynchronous motors up to 60 kW

DC drives
DC speed controllers and DC motors up to 500 kW

Small drives
The modular range of motors and geared motors for customer-specific variants up to 1100 kW

Brakes and clutches
An important addition to your application

Connection systems
From drive to toothed belt
