#### SN74LVC1T45

SCES515L-DECEMBER 2003-REVISED FEBRUARY 2017

# SN74LVC1T45 Single-Bit Dual-Supply Bus Transceiver With Configurable Voltage **Translation and 3-State Outputs**

#### Features 1

- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)
- Available in the Texas Instruments NanoFree™ Package
- Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65-V to 5.5-V Power-Supply Range
- V<sub>CC</sub> Isolation Feature – If Either V<sub>CC</sub> Input Is at GND, Both Ports Are in the High-Impedance State
- DIR Input Circuit Referenced to V<sub>CCA</sub>
- Low Power Consumption, 4-µA Max I<sub>CC</sub>
- ±24-mA Output Drive at 3.3 V
- Ioff Supports Partial-Power-Down Mode Operation
- Max Data Rates
  - 420 Mbps (3.3-V to 5-V Translation)
  - 210 Mbps (Translate to 3.3 V)
  - 140 Mbps (Translate to 2.5 V)
  - 75 Mbps (Translate to 1.8 V)
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II

#### 2 Applications

- **Personal Electronic**
- Industrial
- Enterprise
- Telecom

### 3 Description

Tools &

Software

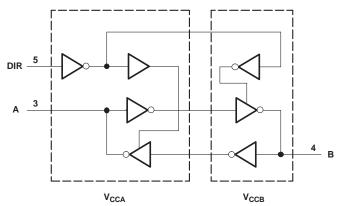

This single-bit noninverting bus transceiver uses two separate configurable power-supply rails. The A port is designed to track V\_{CCA}. V\_{CCA} accepts any supply voltage from 1.65 V to 5.5 V. The B port is designed to track V<sub>CCB</sub>. V<sub>CCB</sub> accepts any supply voltage from 1.65 V to 5.5 V. This allows for universal low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V, and 5-V voltage nodes.

The SN74LVC1T45 is designed for asynchronous communication between two data buses. The logic levels of the direction-control (DIR) input activate either the B-port outputs or the A-port outputs. The device transmits data from the A bus to the B bus when the B-port outputs are activated and from the B bus to the A bus when the A-port outputs are activated. The input circuitry is always active on both A and B ports and must have a logic HIGH or LOW level applied to prevent excess  $I_{CC}$  and  $I_{CCZ}$ .

#### Device Information<sup>(1)</sup>

| PART NUMBER     | PACKAGE    | BODY SIZE (NOM)   |
|-----------------|------------|-------------------|
| SN74LVC1T45DRLR | SOT (6)    | 1.60 mm × 1.20 mm |
| SN74LVC1T45DBVR | SOT-23 (6) | 2.90 mm × 1.60 mm |
| SN74LVC1T45DCKR | SC70 (6)   | 2.00 mm × 1.25 mm |
| SN74LVC1T45DPKR | USON (6)   | 1.60 mm × 1.60 mm |
| SN74LVC1T45YZPR | DSBGA (6)  | 1.39 mm × 0.90 mm |

#### **5** Description (Continued)

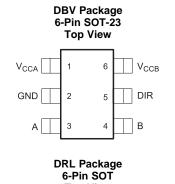

The SN74LVC1T45 is designed so that the DIR input is powered by  $V_{CCA}$ .

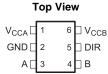

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

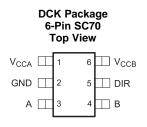

The  $V_{CC}$  isolation feature is designed so that if either  $V_{CC}$  input is at GND, then both ports are in the high-impedance state.

NanoFree package technology is a major breakthrough in IC packaging concepts, using the die as the package.

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

(3) The value of V<sub>CC</sub> is provided in the recommended operating conditions table.

### 7.2 ESD Ratings

|                    |                         |  | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
|                    |                         | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | ±2000 |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1000 | V    |
|                    |                         | Machine Model  | ±200  |      |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

#### 7.3 Recommended Operating Conditions

|                  | Low-level Data inputs <sup>(4)</sup>  | 1.65 o 1.95 V  |                  | ١                     | / <sub>CCI</sub> × 0.35 |                      |      |
| V                |                                       |                | 2.3 to 2.7 V     |                       |                         | 0.7                  | V    |
| VIL              |                                       |                | 3 to 3.6 V       |                       |                         | 0.8                  | V    |
|                  |                                       | 4.5 to 5       | 4.5 to 5.5 V     |                       |                         | $V_{CCI} \times 0.3$ |      |

(1)  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.

(2)  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.

(3) All unused data inputs of the device must be held at V<sub>CCI</sub> or GND to ensure proper device operation. See the TI application report, *Implications of Slow or Floating CMOS Inputs*, SCBA004.

(4) For V<sub>CCI</sub> values not specified in the data sheet, V<sub>IH</sub> min = V<sub>CCI</sub> × 0.7 V, V<sub>IL</sub> max = V<sub>CCI</sub> × 0.3 V.

# **Typical Characteristics (continued)**

### 8 Parameter Measurement Information

- NOTES: A. C<sub>L</sub> includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz, Z<sub>O</sub> = 50  $\Omega$ , dv/dt  $\geq$  1 V/ns.
  - D. The outputs are measured one at a time, with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
  - H.  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
  - I. V<sub>CCO</sub> is the V<sub>CC</sub> associated with the output port.
  - J. All parameters and waveforms are not applicable to all devices.

#### Figure 9. Load Circuit and Voltage Waveforms

### 9 Detailed Description

#### 9.1 Overview

The SN74LVC1T45 is a single-bit, dual-supply, noninverting voltage level transceiver. Pin A and that direction control pin (DIR) are supported by  $V_{CCA}$  and pin B is supported by  $V_{CCB}$ . The A port is able to accept I/O voltages ranging from 1.65 V to 5.5 V, while the B port can accept I/O voltages from 1.65 V to 5.5 V. The high on the DIR allows data transmissions from A to B and a low on the DIR allows data transmissions from B to A.

#### 9.2 Functional Block Diagram

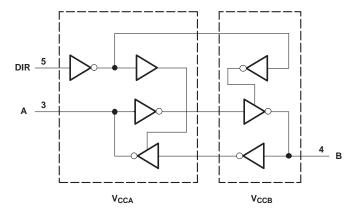

Figure 10. Logic Diagram (Positive Logic)

#### 9.3 Feature Description

# 9.3.1 Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.65-V to 5.5-V Power-Supply Range

Both  $V_{CCA}$  and  $V_{CCB}$  can be supplied at any voltage between 1.65 V and 5.5 V, making the device suitable for translating between any of the voltage nodes (1.8-V, 2.5-V, 3.3-V, and 5-V).

#### 9.3.2 Support High Speed Translation

The SN74LVC1T45 device supports high data rate applications. The translated signal data rate can be up to 420 Mbps when the signal is translated from 3.3 V to 5 V.

#### 9.3.3 I<sub>off</sub> Supports Partial Power-Down Mode Operation

I<sub>off</sub> prevents backflow current by disabling I/O output circuits when device is in partial-power-down mode.

#### 9.4 Device Functional Modes

| INPUT<br>DIR | OPERATION       |
|--------------|-----------------|
| L            | B data to A bus |
| Н            | A data to B bus |

(1) Input circuits of the data I/Os always are active.

### **10** Applications and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

#### **10.1** Application Information

The SN74LVC1T45 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The maximum data rate can be up to 420 Mbps when device translates signals from 3.3 V to 5 V.

#### **10.2 Typical Application**

#### 10.2.1 Unidirectional Logic Level-Shifting Application

Figure 11 shows an example of the SN74LVC1T45 being used in a unidirectional logic level-shifting application.

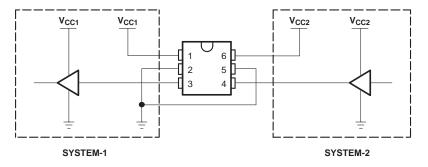

Figure 11. Unidirectional Logic Level-Shifting Application

#### 10.2.1.1 Design Requirements

For this design example, use the parameters listed in Table 2.

| Table | 2. | Design | Parameters |
|-------|----|--------|------------|
|-------|----|--------|------------|

| DESIGN PARAMETER     | EXAMPLE VALUE   |
|----------------------|-----------------|
| Input voltage range  | 1.65 V to 5.5 V |
| Output voltage range | 1.65 V to 5.5 V |

#### 10.2.1.2 Detailed Design Procedure

To begin the design process, determine the following:

• Input voltage range

- Use the supply voltage of the device that is driving the SN74LVC1T45 device to determine the input voltage range. For a valid logic high the value must exceed the  $V_{IH}$  of the input port. For a valid logic low the value must be less than the  $V_{IL}$  of the input port.

Output voltage range

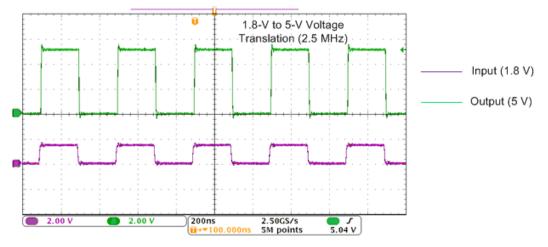

- Use the supply voltage of the device that the SN74LVC1T45 device is driving to determine the output voltage range.

SCES515L-DECEMBER 2003-REVISED FEBRUARY 2017

www.ti.com

#### 10.2.1.3 Application Curve

#### 10.2.2 Bidirectional Logic Level-Shifting Application

Figure 13 shows the SN74LVC1T45 being used in a bidirectional logic level-shifting application. Because the SN74LVC1T45 does not have an output-enable ( $\overline{OE}$ ) pin, the system designer should take precautions to avoid bus contention between SYSTEM-1 and SYSTEM-2 when changing directions.

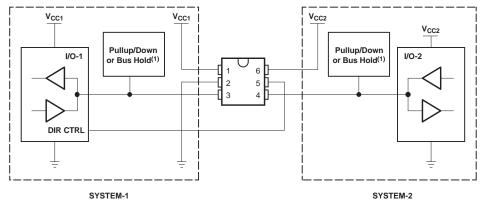

Figure 13. Bidirectional Logic Level-Shifting Application

#### 10.2.2.1 Design Requirements

See Design Requirements.

#### 10.2.2.2 Detailed Design Procedure

Table 3 shows data transmission from SYSTEM-1 to SYSTEM-2 and then from SYSTEM-2 to SYSTEM-1.

| STATE | DIR CTRL | I/O-1 | I/O-2 | DESCRIPTION   |
|-------|----------|-------|-------|---|
| 1     | Н        | Out   | In    | SYSTEM-1 data to SYSTEM-2   |
| 2     | н        | Hi-Z  | Hi-Z  | SYSTEM-2 is getting ready to send data to SYSTEM-1. I/O-1 and I/O-2 are disabled. The busline state depends on pullup or pulldown. $^{(1)}$ |
| 3     | L        | Hi-Z  | Hi-Z  | DIR bit is flipped. I/O-1 and I/O-2 still are disabled. The bus-line state depends on pullup or pulldown. <sup>(1)</sup>                    |
| 4     | L        | Out   | In    | SYSTEM-2 data to SYSTEM-1   |

Table 3. SYSTEM-1 and SYSTEM-2 Data Transmission

(1) SYSTEM-1 and SYSTEM-2 must use the same conditions, that is, both pullup or both pulldown.

#### 10.2.2.2.1 Enable Times

Calculate the enable times for the SN74LVC1T45 using the following formulas:

- $t_{PZH}$  (DIR to A) =  $t_{PLZ}$  (DIR to B) +  $t_{PLH}$  (B to A)
- $t_{PZL}$  (DIR to A) =  $t_{PHZ}$  (DIR to B) +  $t_{PHL}$  (B to A)
- $t_{PZH}$  (DIR to B) =  $t_{PLZ}$  (DIR to A) +  $t_{PLH}$  (A to B)
- $t_{PZL}$  (DIR to B) =  $t_{PHZ}$  (DIR to A) +  $t_{PHL}$  (A to B)

In a bidirectional application, these enable times provide the maximum delay from the time the DIR bit is switched until an output is expected. For example, if the SN74LVC1T45 initially is transmitting from A to B, then the DIR bit is switched; the B port of the device must be disabled before presenting it with an input. After the B port has been disabled, an input signal applied to it appears on the corresponding A port after the specified propagation delay.

#### 10.2.2.3 Application Curve

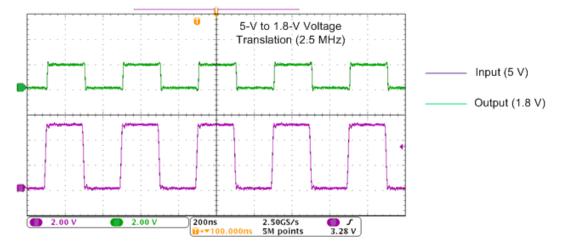

Figure 14. Translation Down (5V to 1.8 V) at 2.5 MHz

SN74LVC1T45

SCES515L-DECEMBER 2003-REVISED FEBRUARY 2017

### **11 Power Supply Recommendations**

The SN74LVC1T45 device uses two separate configurable power-supply rails, V<sub>CCA</sub> and V<sub>CCB</sub>. V<sub>CCA</sub> accepts any supply voltage from 1.65 V to 5.5 V and V<sub>CCB</sub> accepts any supply voltage from 1.65 V to 5.5 V. The A port and B port are designed to track V<sub>CCA</sub> and V<sub>CCB</sub>, respectively allowing for low-voltage bidirectional translation between any of the 1.8-V, 2.5-V, 3.3-V and 5-V voltage nodes.

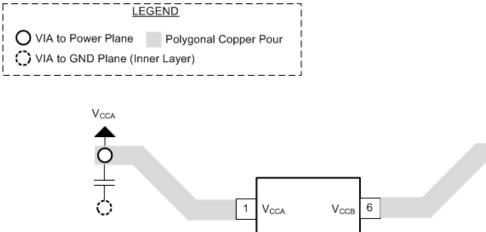

### 12 Layout

#### 12.1 Layout Guidelines

To ensure reliability of the device, the following common printed-circuit board layout guidelines are recommended:

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.
- Placing pads on the signal paths for loading capacitors or pullup resistors to help adjust rise and fall times of signals depends on the system requirements

<sup>(1)</sup> The marketing status values are defined as follows: **ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design. **PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

# **DRL0006A**

# **PACKAGE OUTLINE**

# SOT - 0.6 mm max height

PLASTIC SMALL OUTLINE

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M. 2. This drawing is subject to change without notice. 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side. 4. Reference JEDEC registration MO-293 Variation UAAD

# **DRL0006A**

# **EXAMPLE BOARD LAYOUT**

# SOT - 0.6 mm max height

PLASTIC SMALL OUTLINE

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.

6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.
7. Land pattern design aligns to IPC-610, Bottom Termination Component (BTC) solder joint inspection criteria.

# **DRL0006A**

# **EXAMPLE STENCIL DESIGN**

# SOT - 0.6 mm max height

PLASTIC SMALL OUTLINE

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

9. Board assembly site may have different recommendations for stencil design.

DCK (R-PDSO-G6)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES: A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - D. Falls within JEDEC MO-203 variation AB.

# LAND PATTERN DATA

NOTES:

- A. All linear dimensions are in millimeters.B. This drawing is subject to change without notice.
- C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
- D. Publication IPC-7351 is recommended for alternate designs.
- E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

# **DBV0006A**

# **PACKAGE OUTLINE**

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.2. This drawing is subject to change without notice.3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.

- 4. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation. 5. Refernce JEDEC MO-178.

# **DBV0006A**

# **EXAMPLE BOARD LAYOUT**

# SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# **DBV0006A**

# SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

NOTES: (continued)

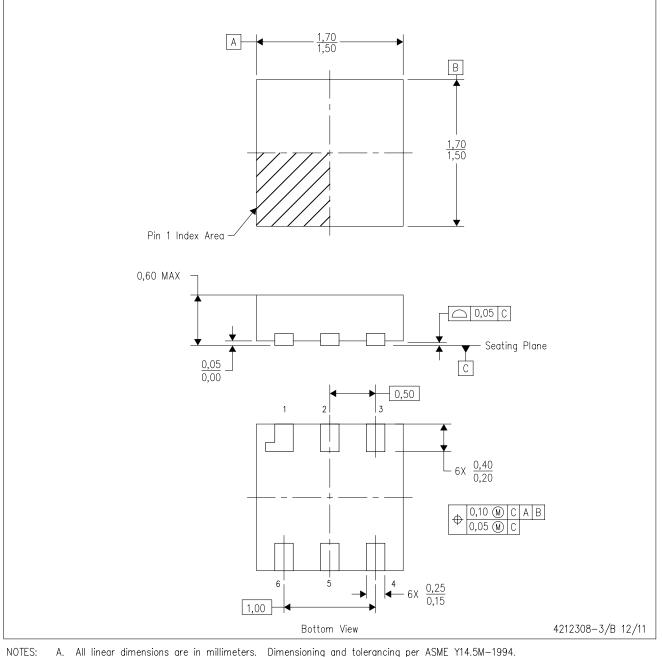

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

9. Board assembly site may have different recommendations for stencil design.

DPK (S-PUSON-N6)

PLASTIC SMALL OUTLINE NO-LEAD

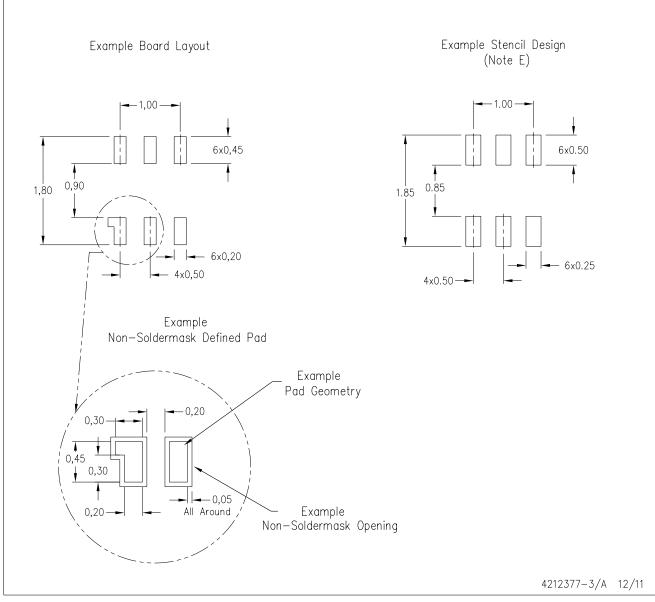

A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
B. This drawing is subject to change without notice.

DPK (S-PUSON-N6)

# PLASTIC SMALL OUTLINE NO-LEAD

NOTES: A. All linear dimensions are in millimeters.

- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
- E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
- F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
- G. Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

# **YZP0006**

# **PACKAGE OUTLINE**

# DSBGA - 0.5 mm max height

DIE SIZE BALL GRID ARRAY

NOTES:

NanoFree Is a trademark of Texas Instruments.

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M. 2. This drawing is subject to change without notice.
- 3. NanoFree<sup>™</sup> package configuration.
