1) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 13.5VDC for 12VDC load voltages. For a load current duration of maximum 3ms for a make/break ratio of 1:10.	
2) See chapter Diagnostics of Relays in our Application Notes or consult the internet at <a href="http://relays.te.com/appnotes/">http://relays.te.com/appnotes/</a>	
3) Measured at nominal voltage without coil suppression unit. A low resistive suppression device in parallel to the relay coil increases the release time and reduces the lifetime caused by increased erosion and/or higher risk of contact tack welding	

**Coil Data**

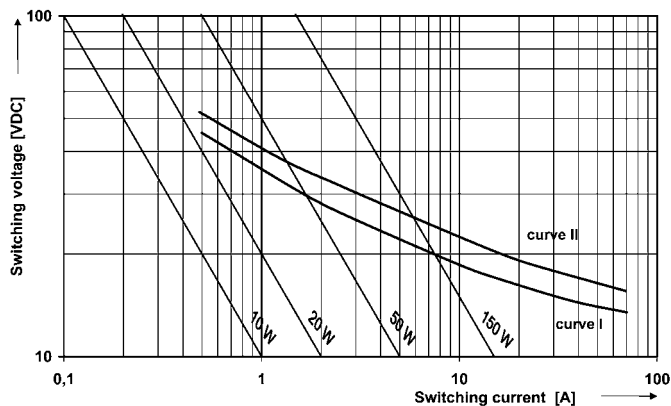

Rated coil voltage	12VDC
--------------------	-------

**Coil versions, DC coil**

Coil code	Rated voltage VDC	Operate voltage VDC	Release voltage VDC	Coil resistance Ω±10%	Rated coil power mW
001	12	6.9	1.5	254	567
002	10	5.7	1.25	181	552

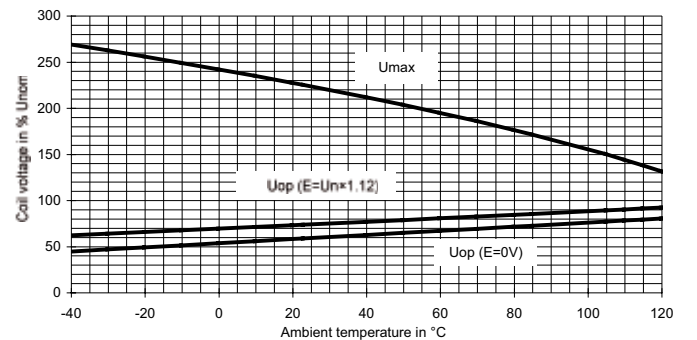

All figures are given for coil without pre-energization, at ambient temperature +23°C.

**Max. DC load breaking capacity**

Load limit curve I: safe shutdown, arc extinguishes during transit time.  
Load limit curve II: safe shutdown, no stationary arc.  
Load limit curves measured with low inductive resistors verified for 1000 switching events.

**Coil operating range**

Does not take into account the temperature rise due to the contact current  
E = pre-energization

**Insulation Data**

Initial dielectric strength	
between open contacts	500VAC <sub>rms</sub>
between contact and coil	500VAC <sub>rms</sub>
