

# Reference Specification

DHR Series
High Voltage Lead Type Disc Ceramic Capacitors for General Purpose

Product specifications in this catalog are as of Feb. 2018, and are subject to change or obsolescence without notice.

Please consult the approval sheet before ordering. Please read rating and Cautions first.

#### ⚠ CAUTION

#### **1.OPERATING VOLTAGE**

When DC- rated capacitors are to be used in AC or ripple current circuits, be sure to maintain the Vp-p value of the applied voltage or the Vo-p which contains DC bias within the rated voltage range. When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use a capacitor within rated voltage containing these irregular voltage.

Voltage	DG Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage(1)	Pulse Voltage(2)
Positional Measurement	Vo-p	Vo-p	Vp-p V	Vp-p	Vp-p

#### 2. OPERATING TEMPERATURE AND SELF-GENERATED HEAT

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or the like, it may have the self-generated heat due to dielectric-loss. Applied voltage should be the load such as self-generated heat is within 10 °C on the condition of atmosphere temperature 25 °C. When measuring, use a thermocouple of small thermal capacity-K of  $\phi$ 0.1mm and be in the condition where capacitor is not affected by radiant heat of other components and wind of surroundings.

Excessive heat may lead to deterioration of the capacitor's characteristics and reliability.(Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

#### 3. OPERATING AND STORAGE ENVIRONMENT

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. And avoid exposure to moisture. The capacitor is designed to be used in the insulating media, such as epoxy resin, silicone oil, etc.. There must be 3mm or more insulating media for each direction of the capacitor. In case of cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 °C and 15 to 85 %. Use capacitors within 6 months after delivered..

#### 4. VIBRATION AND IMPACT

Do not expose a capacitor or its leads to excessive shock or vibration during use.

#### 5. SOLDERING

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.

When soldering capacitor with a soldering iron, it should be performed in following conditions.

Temperature of iron-tip: 400 °C max. Soldering iron wattage: 50W max. Soldering time: 3.5s max.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

#### 6. Limitation of Applications

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

- 1) Aircraft equipment
- 2) Aerospace equipment
- 3) Undersea equipment

4) Power plant control equipment

- 5) Medical equipment
- 6) Transportation equipment(vehicles, trains, ships, etc.)
- 7) Traffic signal equipment
- 8) Disaster prevention / crime prevention equipment
- 9) Data-processing equipment
- 10) Application of similar complexity and/or reliability requirements to the applications listed in the above.

#### **NOTICE**

Cleaning

To perform ultrasonic cleaning, observe the following conditions.

Rinse bath capacity: Output of 20 watts per liter or less.

Rinsing time: 5min maximum.

Do not vibrate the PCB/PWB directly.

Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

#### Capacitance change of capacitor

Class 1 capacitors

Capacitance might change a little depending on a surrounding temperature or an applied voltage. Please contact us if you use for the strict time constant circuit.

Class 2 and 3 capacitors

Class 2 and 3 capacitors like temperature characteristic B, E and F have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor leaves for a long time. Moreover, capacitance might change greatly depending on a surrounding temperature or an applied voltage. So, it is not likely to be able to use for the time constant circuit. Please contact us if you need a detail information.

#### ⚠ NOTE

- 1. Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- 2. You are requested not to use our product deviating from this specification.

EGDR02A - 2 -

# 1. Application

This specification is applied to High Voltage Lead Type Disc Ceramic Capacitors DHR series used for General Electric equipment.

Do not use these products in any automotive power train or safety equipment including battery chargers for electric vehicles and plug-in hybrids.

#### 2. Rating

# 2.1 Operating temperature

-25°C to +100°C

#### 2.2 Part number configuration

<u>DHR</u>	<u>4E</u>	<u>4A</u>	<u>102</u>	<u>K</u>	<u>2B</u>	<u>B</u>

	characteristic	voltage		tolerance	code	style code

#### • Temperature characteristic

Code	Temperature	characteristic
4E	7	ZM

Please confirm detailed specification on [5. Specification and test methods].

#### Rated voltage

Code	Rated voltage
4A	DC10kV
4B	DC12kV
4C	DC15kV

#### Capacitance

The first two digits denote significant figures; the last digit denotes the multiplier of 10 in pF. ex.) In case of 102.

$$10 \times 10^2 = 1000 pF$$

#### • Capacitance tolerance

Please refer to [4. Part number list].

#### • Lead code

Code	Lead style	
2B	Straight long	
2F	Straight long	

Please refer to [4. Part number list].

Solder coated copper wire is applied for termination.

#### Packing code

<u>g</u>					
Code	Packing type				
В	Bulk type				

#### 3. Marking

①Temperature Characteristic: Omitted for nominal body dia. ø8max.

Marked with •(dot): Nominal body dia. ø9 to10.

Marked with ZM : Nominal body dia. ø11 to 14.

Marked with Z : Nominal body dia. ø15min.

②Capacitance: marked with 3 figures. ③Cap. tolerance: marked with code.

(Omitted for nominal body dia. ø8max.)

⑤Manufacturer's identification : Abbreviation ←

(Omitted for nominal body dia. ø14max.)

**©** Manufactuered Date: marked with code.

(Omitted for nominal body dia. ø14max.)

ex. 6 12 0 1) The last number of A.D. year

1) 2) 3) 2) 2 numbers of the month January  $\rightarrow$  01, ..., December  $\rightarrow$  12

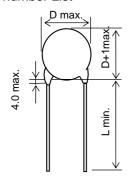

(Example)

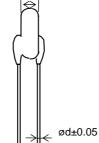

102K Z **€** 10K

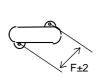

6120

3) Fix No.

		lead wires)		for 4 h at room condition.
N	T ( D: 1 ()		OI /D: I	test Humidity Life and Temperature Cycling

Note) Tests for Dielectric strength(Between lead wires) ,Charge/Discharge test, Humidity , Life and Temperature Cycling shall be performed with specimens having molded resin (MR1023C:made by Murata) extending over 3mm on all the surface.

Room condition

Temperature:15~35°C Relative Humidity:45~75% Atmospheric pressure:86~106kPa

# 6. Packing Specification

Packaging Styles : Bulk type

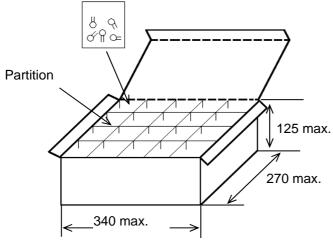

(Packing style code : B)

\*1 \*2

The number of packing = Packing quantity  $\times$  n

The size of packing case and packing way

\*1 : Please refer to [Part number list].

\*2 : Standard n = 20 (bag)

#### Note)

The outer package and the number of outer packing be changed by the order getting amount.

Unit: mm

EKBLDHR01 -7-

### EU RoHS RoHS指令への対応

This products of the following crresponds to EU RoHS 当製品は以下の欧州RoHSに対応しています。

#### (1) RoHS

EU RoHs 2011/65/EC compliance 2011/65/EC(改正RoHS指令)に対応

maximum concentration values tolerated by weight in homogeneous materials

- •1000 ppm maximum Lead
- •1000 ppm maximum Mercury
- •100 ppm maximum Cadmium
- •1000 ppm maximum Hexavalent chromium
- •1000 ppm maximum Polybrominated biphenyls (PBB)
- •1000 ppm maximum Polybrominated diphenyl ethers (PBDE)

鉛:1000ppm以下 水銀:1000ppm以下 カドミウム:100ppm以下 六価クロム:1000ppm以下

ポリ臭化ビフェニル(PBB): 1000ppm以下

ポリ臭化ジフェニルエーテル(PBDE): 1000ppm以下
