## Dual 1 Form A Solid-State Relay

## DESCRIPTION

The LH1505 contains two normally open switches that can be used as two independent SPST relays or as one DPST relay. The relay is constructed using a GaAIAs LED for actuation control and integrated monolithic dies for the switch outputs. The die, fabricated in a high-voltage dielectrically isolated technology, is comprised of a photodiode array, switch control circuity, and DMOS switches. In addition, the LH1505 relay employs current limiting circuitry, enabling it to pass lightning surge testing as per ANSI/TIA-968-B and other regulatory voltage surge requirements when overvoltage protection is provided.

## FEATURES

- Two independent relays
- Current limit protection
- Isolation test voltage $5300 \mathrm{~V}_{\mathrm{RMS}}$
- Typical RoN $15 \Omega$
- Load voltage 250 V
- Load current 120 mA
- High surge capability
- Clean bounce free switching
- Low power consumption
- High reliability monolithic receptor
- SMD lead available on tape and reel
- Compliant to RoHS Directive 2002/95/EC and in accordance to WEEE 2002/96/EC

## APPLICATIONS

- General telecom switching
- On/off hook control
- Ring delay
- Dial pulse
- Ground start
- Ground fault protection
- Instrumentation
- Industrial controls

## AGENCY APPROVALS

UL1577: file no. E52744 system code H, double protection
CSA: certification no. 093751
BSI/BABT: certification no. 7980
DIN EN: 60747-5-2 (VDE 0884)/60747-5-5 (pending), available with option 1
FIMKO: approval

## Notes

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.
(1) Refer to reflow profile for soldering conditions for surface mounted devices (SMD). Refer to wave profile for soldering conditions for through hole devices (DIP).
(2) Breakdown occurs between the output pins external to the package.
(3) Refer to current limit performance application note for a discussion on relay operation during transient currents.

ELECTRICAL CHARACTERISTICS $\left(\mathrm{T}_{\mathrm{amb}}=25^{\circ} \mathrm{C}\right.$, unless otherwise specified)
